IMPROVED FARMS

We have a few special chances to locate some good farmers on first-class improved farms in one of the best farming districts in Saskatchewan. Main line C. P. R., good town, six elevators, good schools, fertility of soil, unequalled. Terms easy. Write at once for particulars, stating how much land wanted, whether you want all prairie or partly wooded, all for wheat or mixed farming, and the amount you can pay down. Information and experience of 24 years residence in the country is at your disposal for the asking.

B. P. RICHARDSON,
Grenfell, Sask.

Nothing gives results like an Advocate Ad.

The Bumper Crop Begins with the Good Seed Bed

Every experienced farmer knows that if he would grow the largest crop possible, he must begin with the very first work on the ground.

Correct preparation of the seed bed is of the greatest importance. And this depends in large measure on the kinds of implements used.

With Deering Harrows and Drills there is no question as to results as far as ground preparation and seeding is concerned. They have been tested under every condition and developed from year to year until they represent the highest type of efficiency.

The Disk Harrow (inthrow and outthrow fork) is especially adapted by its construction to resist the severe strain to which a harrow of this kind is subjected, especially when opening a stiff soil. The disks are made of special tempered steel, and can be set at any desired angle by means of levers. No matter what the ground conditions, the Deering Disk Harrow works perfectly.

The Smoothing Harrow has proved especially well adapted for working stony land. Inasmuch as this harrow is built on the square and drawn on an angle from one end of the middle to the double-tree, the soil is always cultivated the full width of the harrow.

The Shoe Drill is an ideal drill for use in loamy soils or those somewhat sandy. It cuts a very clean seed furrow, drops the seed regularly and with the aid of the chain covers perfectly. Has double run force feed, pressure springs control depth of shoes and enable them to pass over obstacles without injury. Strong angle steel frame, high broad faced wheels. Made in four sizes: 14, 16, 20 and 22 shoes.

The Deering Single Disk Drill. The disks on this drill are staggered so that the drill is a zigzag disk drill. This provides for wide clearance between the disks and makes it an ideal implement for seeding stubble or rough and cloddy land. The disks are set at the correct pitch to cut

into the soil to the proper depth and the ground is left in good condition for depositing the seed. Each disk is equipped with a curved knife scraper. This Drill is made in four sizes, namely 14, 16, 20 and 22 disks.

The Sectional Cultivator is unexcelled for tearing up the stiffest soil. The machine is unusually substantial in construction and the teeth are made from the finest tempered steel. This machine is so strong that it has been used to tear up Macadamized roads. This gives an idea of the wonderful strength and the tearing up power of the teeth. This cultivator can be changed into a seeder by attaching a seed box. Made in two sizes, 6 feet with 3 sections, and 7½ feet with 4 sections.

The Deering line of Tillage Implements and Seeding Machinery for Canada is complete and includes, in addition to the above, Spring-Tooth Harrows, Scrufflers, Cultivators and Land Rollers.
