lersey Cattle Interests Are Progressing in the West

By an Editor of Farm and Dairy.

NY lover of dairy cattle who A visits western Canada and takes in the leading summer and fall exhibitions cannot help being impressed by the numerous excellent herds of Jersey cattle that he will find at the various exhibitions. This nnd at the various exhibitors. In is especially true of Alberta and British Columbia, as while there are good Jersey herds at the Experimental Stations and Agricultural Colleges in Manitoba and Saskatchewan, the climate and soil conditions of Alberta and British Columbia seem to be better suited to the raising of good Jersey cattle. This applies also to the other dairy breeds. In western Canada large towns and

In western Canada large towns and cities are not numerous, and the manufacture of cheese is but little practiced. The making of butter, on the other hand, is becoming an important industry. Cows which can be counted upon to give a large yield of butterfat are therefore sure to be popular. This helps to explain why Jerseys are now one of the principal breeds in Alberta, where the finest butter in Canada is manufactured. They are popular also in British Columbia, where profitable prices are paid for butter and cream. Another paid for butter and cream. Another factor that is helping Jerseys in Brit-ish Columbia is the method adopted by the local cow-testing associations of including the cost of production in the records that are kept of the production of each cow, so that the net profit in each case is shown. Certain it is that pure-bred Jersey and Jersey grade cattle have been increasing rapidly during the past few years in British

Columbia. Utility Type Pre-

ferred. There have ome Jerseys imported into western from the United States during the past year that in beauty of type and conformation will hold their own with the best show yard animals that eastern Can-ada can produce. This is saying a good deal when we consider the rarely good animals that are found in such herds as those of B. H. Bull & Sons, of Brampton, and Sir William MacKenzie at Kirkfield, and Mr. Robert Fleming's at at Toronto. Neverthe-

less, the fact is that the west prefers a larger and more rugged type of Jersey than is commonly noticed in the show yards in the east. The people of western Canada are essentially practical. They have little regard for show and fine feathers, but a high opinion of everything that has a direct utility value. This it is which is leading them to demand a type of

Jersey cow that while testing high will also yield a large mess of milk. An Outstanding Herd.

In last year's Western Canada numher of Farm and Dairy mention was made of the well-known Jersey herd of J. Harper & Sons, of Westlock, Alberta. For some years this herd has been the leading Jersey herd shown at the exhibitions in the prairie cir-cuit. This year this herd has been re-markably successful in cleaning up most of the prizes. During the past 12 months it has been strengthened by the purchase of 12 animals from leading breeders in Kentucky and Wis-consin, with the result that it is stronger than ever before. Five of

these animals were secured from the famous Allandale Farm at Shelby, Ky., the purchase price of several of them running into four figures each. Two of these animals formed part of Two of these animals formed part of the winning breeders' young herd last year at a number of the leading fairs in the United States. All five were from high-testing animals in the American Registry of Merit. One heifer was recently imported from the Island and a second one was brought over three years ago.

Mr. Harper's show herd this year comprised 19 animals. At Calgary it won all the red tickets but one, and won all the red tickets but one, and in that class they did not have an ani-mal to enter. At Red Deer they got all the first prizes, there being only one other competitor. At Edmonton they took all the first prizes but two. they took all the first prizes but two. Here they were defeated in the junior yearling bull class by an animal of their own breeding. At the Brandon Exhibition we had the privilege of looking over their stock, including their recent importations, and were not surprised when we were informed that Mr. W. W. Ballantyne, of Strategy are and Mr. W. W. Stephen, of ford, Ont., and Mr. W. F. Stephen, of Huntingdon, Que., who judged at some of the western fairs this year, had ex-pressed the belief that they were as fine animals of the breed as ever have the animals of the oreed as ever have been imported into Canada. This is particularly true of You-Will-Do-Sweet-Thistles-Tattoo, a two-year-old which this year has been winning the grand championship for the breed on the western circuit. Certain it is that she is a rarely good one.

sne is a rarely good one.

A Utility Herd.

A typical western utility Jersey herd is that on the farm of W. J. Williamson, of Fort Saskatchewan, about 20 miles out of Edmonton. Mr. Williamson has been breeding Jerseys for only a few years, but already has secured stock which does him credit, and which will assure him, if his present plans are carried out, havhis present plans are carried out, hav-ing in time a herd of great merit. This herd was started only five years ago. Mr. Williamson left Lindsay, ago. Mr. Williamson lett Lindsay, Ont., and moved to the west in 1905. For a couple of years he lived in Ed-monton, and later on bought a farm near Edmonton. About five years ago he purchased his present farm of 365 acres from his brothers and com 365 acres from his brothers and commenced the breeding of Jerseys. His first start was made with three females purchased from John Steinford, who had procured them from David Ure, of Windsor, Ont. All three animals are still in the herd, and have done well for Mr. William-

"My aim in breeding," said Mr. Williamson, "is to develop a strong type of animal which, while testing high, will also give the largest possible yield. So far I have been aiming to secure strength and size rather
