horns are bred and developed for big milk production. If you want a stock bull bred that way, we have several; also Clyde, standing rising 3, won 2nd at Guelph the other day in a big class. P. Christie & Son, Manchester, Ont.

Shorthorns

bulls, females, reds, roans, size, quality. Breeding milkers over 40 years. Cows milking 50 lbs. a day. Big, fleshy cows that will nurse calves right. Prices easy, write: Thomas Graham, R. R. 3, Port Perry, Ont.

Questions and Answers. Miscellaneous.

Shorts for Pigs.

Is high-grade shorts at \$25.00 per ton a good economical feed for young pigs from six weeks old up to the age of four and a half months? Which would be the better way to feed shorts—wet or dry? Consider oats at 45 cents per bushel, barley at 60 cents.

J. W. D.

Ans.—Shorts make a splendid feed for young pigs, and, at the prices mentioned, would prove economical. Some feeders prefer mixing finely ground oats with the shorts, but pigs will do well on shorts and skim milk up to the time they are four months old. After that age heavier feeds should be added. Both methods have their advocates, but for young pigs it would appear that the shorts should be fed wet, although for older pigs it is doubtful which method gives most satisfactory results.

Lawful Fence—Outlet for Drain.

What is a lawful fence at present in Ontario? Is it supposed to hold sheep, pigs or calves? We have a railway fence through our property of about 1,500 yards that is seven strands high, three feet eleven inches from under wire to top wire. Our sheep run under the fence several places. Who would be responsible if any of our stock got killed?

We have a couple of tile drains which run to the public highway. Is the municipality supposed to give an outlet across the highway?

R. B.

Ans.—1. Each municipality has the power to set its own standard of fences. It would be advisable to consult the clerk of your township regarding this matter. If the stock get through the fence and are killed, we believe that the railway company would be responsible if they had previously been notified that the fence was out of repair.

2. If the public highway affords the natural outlet for the water, the municipality would give an outlet, but the person or persons directly benefited would be required to pay their share of construction and upkeep of the same.

Working a Farm on Shares.

A owns a farm and lets it on shares to B. A furnishes all the stock and implements. Who is supposed to buy repairs, such as plow-shares and cultivator teeth and pay for veterinary bills, taxes, clover seed, etc.? As B gets one-third for working the place, does he have to furnish all the meals for threshing? Who is supposed to furnish the churn, butter-bowls, etc., for making butter? Does A have to help pay for threshing and silo filling?

E. S.

Ans.—A properly-executed agreement covering all these points should have been drawn up at the outset. As we understand the agreement, A is to get two-thirds of the proceeds of the farm for his investment, while B is supposed to have one-third of the returns for his labor. B would be required to pay for and board any hired help he might require. As threshing partially comes under this, it would be expected that B board the men assisting in this work. Repairs, taxes and other expenses, as threshing and silo filling, should be paid by both A and B, according to their share of the returns. The same would apply to the equipment for making butter. A should pay two-thirds and B one-third of the cost.

Killing Willow Sprouts—Sweet Clover.

1. Is there any particular time of year to cut soft-maple, basswood or willow sprouts so as to kill them at the root?

2. If sweet clover and oats were sown in the spring would the clover attain sufficient growth to be of value for pasture this year?

3. What grasses would you recommend sowing with oats and sweet clover?

A. C. A.

Ans.—1. The time of cutting does not appear to have much effect on killing the roots. It is claimed that by boring a hole into the stump, filling it with salt and then plugging it, the sprouts will cease to grow.

2. No doubt but that there will be a certain amount of pasture, but it will depend somewhat on the season.

3. If sweet clover grows satisfactorily it is doubtful if it would be necessary to sow any of the grasses. The second year after seeding, sweet clover alone has given an abundance of feed. The grasses used for a permanent pasture would be more or less smothered by the sweet clover.

Users here state the FACTS!

Write for Illustrated Booklet explaining the reasons why

EMPIRE MECHANICAL MILKERS

are good for the Cows
as well as for the owners.

Here are the written statements of some dairy farmers who have used the Empire Mechanical Milker long enough to be able to judge its effects on the cows:

From Chas. Bacon, Cooper, Ont.:

"The cows take it well and like it. Have had no garget nor cow pox whatever nor bad effects."

From C. W. Dracup, Harold, Ont.:

"I believe my cows are in better shape than by the hand milking. We haven't had a bit of cowpox as in other years, and I believe the machine has been responsible in preventing it. . . . They seem to like it; in fact I have known them to bawl to be milked."

From John Detlor, Stirling, Ont.:

"We find our cattle prefer it to hand milking, and their flow has actually increased."

From Aaron Wagler, Baden, Ont.:

"My cattle like the milker in preference to hand milking."

From J. T. Prescott, Sussex, N. B.:

"We have milked 37 cows in 40 minutes with two double units, . . . and the cows' teats are in better condition than ever."

From M. C. W. Kay, Sussex, N. B.:

"All the cows that had sore teats before using the machine are now all right."

From Geo. Willison, Woodstock, Ont.:

"The cows take to it well."

From M. G. Ransford, Clinton, Ont.:

"It has proven perfectly harmless to the cows; in fact many have increased in production of milk."

These are only extracts from a few of the scores of letters from purchasers which tell enthusiastically how the Empire Mechanical Milker saves time—cuts down expenses—improves the quality of the milk—increases profits—and solves the problem of hired help.

Our new Illustrated Booklet explains how the Empire Mechanical Milker duplicates the natural action of the sucking calf, and is actually better for the cows than hand milking. Fill in the coupon below and we'll send you a Booklet by return mail.
