

The lesser weight has been put down, as best representing the weight of the majority.

MISHAP TO INCUBATOR.

On the 26th of May last one hundred eggs were put into the Bessey Incubator. The hatching went on successfully until the sixth day when the lamp of the incubator burst into flames and was injured beyond immediate repair. The eggs were removed to another machine operated on the hot water principle without lamp, but in so doing several hours' delay unavoidably occurred and what eggs were not spoiled before were chilled by the long waiting. The machine was, however, attended to for the full period but only ten chickens came out.

(To be continued.)

ANSWERS TO CORRESPONDENTS ON DISEASES, BREEDING, MANAGEMENT, ETC.

Correspondents are requested to make full use of this column. The answers to enquiries as to diseases will be answered by a well-known medical man and breeder. Please read the following rules carefully.

1. Give a concise, clear and exact statement of case, always stating age, sex, and breed.
2. Enclose 3 cents stamp for reply.
3. Report result, not necessarily for publication. *This is absolute.*
4. Acute cases requiring immediate treatment to be answered by mail in the first instance, later through POULTRY REVIEW for the benefit of our readers.
5. Write legibly and on one side of the paper only.
6. Answers to be in name in full, initials or *nom de plume*, the first preferred.

QUE.—I will have to trouble you for advice again concerning my Langshans. One of my hens has a thick coating in the mouth resembling dough, quite hard, on removing it it bled some, the hen is very poor, she has had soft feed, turnips, clover, onions, in fact been well attended to, I am afraid I will lose her, she does not run at the nose, comb and wattles are good color, she is very stupid. Enclosed you will find stamp for reply, please answer by return mail.

I followed your instructions before and it cured my fowls.

PHILIP HART,

Belleville, Ont.

ANS.—Your fowls have canker, which is liable to become roup.

Beware of draughts, cold and wet; but at the same time nothing disposes to all sorts of ailments like foul air, so you must ventilate more than was necessary in winter.

Treatment:

Powdered chlorate of potash. 3 grains.

Tincture of iron 5 drops.

To be given twice or thrice daily. This may be given in gelatine capsules, No. 00, the iron dropped on a piece of bread, the powder sprinkled over this and the whole placed far back in the mouth of the bird.

As a local application use the following three times a day:

| | |
|----------------------|---------------------------------------|
| Glycerine, - 8 parts | } Mixed well together and painted on. |
| Tincture of iron 4 " | |
| Carbolic acid 1 " | |

Mr. J. H. Cayford, Box 1,168, Montreal is our Agent and Correspondent for the Province of Quebec. Any correspondence relating to subscriptions or advertising may be addressed to him.
