Vol. XI.

HALIFAX, NOVA SCOTIA, SEPTEMBER, 1899.

No. 9.

The Digestibility of Mothers' Milk is the only Common-sense, Scientific Standard for the Food of Healthy Infants.

Mothers' milk has a peculiar characteristic digestibility exactly suited to the digestive functions of the infant.

Milk prepared with Fairchild's PEPTOGENIC MILK POWDER by the regular directions, gives the infant stomach just the same work to do as does mothers' milk. The caseine of the milk, under the action of the Peptogenic Powder, has undergone no greater modifications than are necessary to bring it to the soluble condition characteristic of the albuminoids of mothers' milk.
