

Elucera in the Food Exchange Powerful Digestive Preparations.

During the past decade we have led every advance toward increased proteolytic and diastatic activity. We now invite attention to a few leading products in this line.

Pepsin Cordial: One teaspoonful will completely digest 2000 grains of coagulated and disintegrated egg albumen. One fluidrachm will curdle 33 ounces of warm milk in a few minutes. A palatable and active preparation.

Essence of Pepsin: Our Essence possesses the same curdling power as the Cordial. In point of proteolytic activity, each fluidrachm digests 2000 grains of egg albumen.

Liquid Pancreatin: A concentrated preparation possessing all the digestive properties of the pancreatic fluid. Two fluidrachms will peptonize 15 fluidounces of milk in from one to one and a half hours at 110° F. A permanent preparation, admirably suited to various combinations.

Taka-Diastase: Beyond all comparison the most potent form of diastase ever placed on the market, this product has proved remarkably efficacious in dispelling the distressing symptoms of starch-dyspepsia. The clinical experience of distinguished specialists is embodied in the literature which we furnish on application.
