

but it contains a great deal of new material, more especially chapters on amaurotic family idiocy, adiposis dolorosa, transcortical aphasia, the fourth disease, and albuminuria. All through the work, the author has given careful attention to the daily needs of practitioners and students.

*A Text-Book of Clinical Anatomy.* For Students and Practitioners. By DANIEL N. EISENDRATH, A.B., M.D., Clinical Professor of Anatomy in the Medical Department of the University of Illinois (College of Physicians and Surgeons); Attending Surgeon to the Cook County Hospital, Chicago, etc. Handsome octavo of 515 pages, beautifully illustrated with 153 illustrations, a number in colors. Philadelphia, New York, London: W. B. Saunders & Company. 1903. Cloth, \$5 net; sheep or half morocco, \$6 net. Canadian agents: J. A. Carveth & Co., Toronto.

Any book that will materially assist the medical student to apply the knowledge he gains during his career at college to his daily work in later years is simply invaluable. This, we take it, is what Professor Eisendrath intended in writing his text-book of clinical anatomy, and we can but say that he has succeeded in his object. He has bridged over the chasm between student and practitioner as far, at least, as descriptive anatomy and its application in the operating-room is concerned. The half-tone illustrations could not be improved upon, as also the typography.

*A Text-Book upon the Pathogenic Bacteria.* For students of medicine and physicians. By JOSEPH MCFARLAND, M.D., Professor of Pathology and Bacteriology in the Medico-Chirurgical College, Philadelphia; Pathologist to the Philadelphia Hospital and to the Medico-Chirurgical Hospital, Philadelphia. Handsome octavo volume of 629 pages, fully illustrated, a number in colors. Philadelphia, New York, London: W. B. Saunders & Company. 1903. Cloth, \$3.50 net. Canadian agents: J. A. Carveth & Co., Toronto.

It is only a short time since the third edition of Dr. McFarland's work was placed in the hands of the profession; but, so rapid have been the strides made in pathology, that he wisely decided to re-write his book, so that it will the better maintain its reputation as being invariably free of old matter, and full of what is only most recent and up-to-date. Dr. McFarland has added quite a quantity of new material, so that the volume is considerably larger than its predecessor. College students will act wisely in providing themselves with a copy, and will find that, in their laboratory work, it will prove of the greatest assistance to them.
