87 St. Joseph Street, Montreal.

OUR RETAIL ESTABLISHMENTS. THE EXTENSIVE CLOTHING HOUSE OF J. G. KENNEDY & CO.

It has been the aim of the Commercial Review, in the exhibits we have made of the various branches of industry with which our city abounds, to mention only those establishments that can be fairly called representatives of their trade. And while as a general rule we have taken only those which do wholesale business, we have not overlooked those in the retail trade which, from the magnitude of their operations, deserve especial mention. Within the last few years a great change has taken place in the clothing trade. Ready-made goods are now produced in as fine fabrics and as good styles and make as are the most of custom-made suits. In fact there are many of our best citizens who buy ready-made clothing entirely, and none of their acquaintances are aware that their stylish suit do not come from a fashionable tailor. Especially has this feature of the trade been apparent during the hard times and when economy was a necessity. The most extensive retail clothing house in this city is that of Messrs. J. G. Kennedy & Co., No. 31 St. Lawrence St. We had the pleasure of visiting this establishment a few days since, and we can safely assert that a larger finer or more stylish stock of clothing would be hard to find. The building occupied by them is four stories in height and is filled to repletion with every class of goods in the clothing line, comprising men's boys' and youths' ready-made clothing in every variety, Canadian and Scotch tweeds, cassimeres, doeskins, &c. On the first floor is the stock of over coats, suits, &c., in the latest styles and makes, and sold at prices to suit the most exacting. Indeed it would be difficult to find a customer who could not be suited in his department. The measuring and cutting department is also on this floor. Here the finest custom-made clothing can be obtained at minimum prices. The 3rd and 4th floors are devoted to clothing of every description. They carry at all times a fine stock of tweeds, broadcloths, &c., in bales. Their clothing for excellence of quality and first class workmanship and finish cannot be surpassed. We commend any of our readers who really want superior, well fitting, stylish and durable custom or ready-made garments at bottom prices to pay this house a visit they are sure to be suited by going to this fine establishment.—Advt.

J. P. NUGENT, MERCHANT TAILOR

NATURALISTS' PORTFOLIO.

THE INVERTEBRATE.—Doctor Roussingault states that mollusks and other invertebrate animals contain almost as much iron in their blood as the vertebrate animals, while cryptogamic plants also contain a large proportion of the metal.

FUNGI.—Foreigners eat a great many more sorts of fungi than we do, but then they are in some place. Some especially, under the management of a Government official. Such, at any rate, writes a correspondent, was the case a few years ago. All the fungi brought into Rome at the different gates during the certain seasons of the year—forty days in autumn and twenty in spring—were registered and sent to a central depot there to be daily examined by the inspector. This gentleman's office was not a sinecure considering the enormous quantities deposited in the fungus market. No one was allowed to hawk fungi about the streets, and all the stale or worm-eaten mushrooms of the preceding day were sent under proper escort to the Tiber. For weeks and weeks together fungi furnish Italians, French, and Germans with good nourishing food, while in England, where even a still greater number of esculent fungi are found through the most edible fungi away.

A BOTANICAL ANOMALY.—The common assertion that the shamrock will not grow out of Ireland has been tested by a gentleman curious in superstitions, living under the best climatic influence at the north-west side of Regent's Park, London. Being sceptical as to the tradition about the non-existence of Irish snakes, he endeavoured, but unsuccessfully, to get a Hibernian specimen. He then tried his hand at shamrocks, but after series of experiments, has been compelled to give into superstitition. The genuine shamrock has been sent over with its roots intact and with its native earth still clinging to them. It has been carefully planted and watered, and has repaid the care bestowed upon it by a luxuriant growth of stalk and leaf wholly dissimilar to those of the original plant. The stalk has grown to be from eight to twelve inches long, and the leaves have resembled those of ordinary trefoil. In fact, it was a long, straggling dissipated-looking plant, that rapidly degenerated into a weed. But the most remarkable part of the story remains to be told and that is, that the Anglicised and deteriorated shamrock has in every case died on the approach of winter. The stalks and leaves turned yellow; then became the colour and consistency of dried hay, and eventually wasted away. We do not profess to supply any clue to the mystery, but the circumstance is a curious one, upon which some of our readers may be able to throw light. Possibly the air of England is obstructive and that our climate is not sympathetic.—Globe.

ABOUT BIRDS.—In New London Conn., a few weeks ago, an oriole's nest became detached by the wind from a tall elm, and fell to the ground. The nest, when found, contained four young nestlings. Another of the brood fluttered from the nest just as it fell, and remained in the tree. The four young birds were caged and placed over the portico. Here they were daily fed by the parent birds, who manifested for them the liveliest solicitude, alternately flying from the cage to the isolated member of the brood in the tree with food. But the tenants of the cage, being near the ground, seemed to share the larger part of the parental attention. On the approach of cats, dogs, or human beings, notes of warning and distress were constantly uttered by the older birds and they would frequently flutter above the head of the pedestrian as if to divert his attention from the brood. A few days ago the little ones seemed to be ill, and it was presently discovered that they were being fed by something of a poisonous nature. They seemed unable to move or open their eyes, and their death took place in a few hours. The remaining young bird soon died, and fell from the tree. The old birds were now observed to grow listless and so remained perched on the roof near the cage, and to be in the deepest dejection. But, as it appears, they had also partaken of the poison, and in a few hours fell to the ground in a dying state. The substance by which these birds were poisoned appeared to be a viscid bark, gelatinous material, such as is sometimes observed on the surface of stagnant pools. It was clearly a case of infanticide and suicide. It is learned that this is not an isolated instance, and that other birds, especially the robin, have been supposed, by casual observers, to poison their young when they were captured or crippled by accident.

THE LAST WOLF IN IRELAND, AND THE IRISH WOLF DOG.—During the seventeenth century Wolves were numerous in Ireland. In the mountains of Tyrone the inhabitants suffered much from them, and gave, from the public funds, as much for the head of a wolf as they would in aftertimes for the capture of a notorious robber of the highway. At that time there lived an adventurer, Rory Curragh who made it his occupation to destroy these ravagers. He attacked them in the night; midnight the best time, as they left their lairs in search of food, all round being still, and then the carnage commenced. He, like others, was aided in so doing by the celebrated wolf dog, having

An eye of sloe, with ear not low, With horse's breast and depth of chest, With breadth of loin and curve of groin, And nape set far behind the head. Such were the dogs that Fingal bred, and such was the dog thus employed. It is said to have resembled a rough, stout, half-bred greyhound, but was much stronger. In the county Tyrone there was at that time a large space of ground enclosed by a high stone wall, having a gap at the two opposite ends and in this enclosure were the flocks of the surrounding farmers considered to be secure. It was, however, entered by the wolves, and its inmates slaughtered. The farmers having heard of Rory Curragh, the wolf-hunter, sent for him, offering to increase the usual reward if he would destroy the two remaining wolves that had committed such devastation. Curragh undertook the task, took with him two wolf-dogs and a boy twelve years old (the only companion he could obtain), and, as midnight approached, repaired to the fold. "Now," said the hunter to the boy, "as the two wolves usually enter at the opposite extremities of the fold at the same time, I must leave you and one of the dogs to guard this one while I go to the other. He steals in with all the caution of a cat; nor will you hear him, but the dog will, and positively give him the first fall. If therefore you are not active when he is down to rivet his neck to the ground with this spear, he will rise up and kill both you and the dog. So good night?" "I'll do what I can," said the little boy, as he took the spear from Curragh's hand. Immediately he threw open the gate of the fold, and took his seat in the inner part near to the entrance, his faithful companion crouching close to his side, and seeming conscious of the dangerous business in which he was engaged. The night was very dark and cold, and the poor boy, being bonumbed by the chilly air, was beginning to sleep, when the dog in an instant, with a roar leaped across him, and laid his mortal enemy who had just arrived on the earth. Roused to the utmost energy by the voice of his companion, the boy drove the spear through the wolf's neck, by which time Curragh stood at his side, bearing the head of the other wolf. The death of the last Irish wolf cannot be precisely determined. There was however a presentment for killing wolves granted in Cork in the year 1710, and it is asserted by many persons of veracity that a wolf was killed in the Wicklow mountains as recently as 1770.

THE MIC-MAC REMEDY A SPECIFIC FOR SMALL-POX. ANOTHER VICTORY FOR MAJOR LANE. A HOPLESS CASE OF SMALL-POX CURED BY THE MIC-MAC REMEDY. To MAJOR JNO. LANE, GREENFIELD, MASS.

DEAR SIR,—I telegraphed for a package of your Small-Pox Remedy on last Monday, which I received the following day. I would have instantly responded and forwarded the money, but thought I would await the result of its trial. I prepared the medicine myself so as to render everything secure; and I am proud to be able to state that it produced almost instantaneous relief. It was a malignant case of Small-Pox—in fact, there was no hope of recovery expressed on any side; but by the application of your famous Remedy it easily yielded. Enclosed I send you a five dollar bill. Please acknowledge. Your truly, Rev. W. A. HENDEBERT. Price \$5 per package. Sent to any part of the Dominion, post paid on receipt of price—a liberal discount to Clergymen, Physicians and Charitable institutions. B. E. MICALLE, Dispensing Chemist, 301 St. Joseph Street.
