

SUMMARY OF THE AUSTRALIAN HEALTH CARE REPORT

The report provides an overview of the current climate in the Australian health care industry. It is designed as an overview for Canadian companies considering entering the Australian market.

It also identifies key players in either the medical equipment or pharmaceutical sectors, which are dominated by the United States, West Germany, United Kingdom and Japan.

The report also identifies key health care industries in each state in the country. There would be opportunities for the Canadian companies to enter the market on the ground floor, if so desired.

The report has been prepared to provide information regarding the current climate in the Australian health care system, the direction of the industry, and the possibilities of entering the Australian health care system.

The report is intended to point out weaknesses in the industry and to identify the obstacles which need to be overcome.

If you are interested in the study, you require further information on the Australian market, please write, telex or fax the Director General, Sydney, detailing your company's interest, advising which products you manufacture and are interested in marketing.
