distance of 58 feet. The ore is of the The incident made a great impression dors. concentrating variety and of a quality locally. that can be treated by local processes without the intervention of a smelter. The tunnel on the Wild Horse has now reached a length of 154 feet and the vein is widening out as depth is gained.

This has made a crosscut advisable in order to ascertain its width. Ymir is making quiet but steady progress as a mining center, and is getting down to a business basis. It is growing and the outlook is that it will ere long be a town of considerable importance.

BACK FROM LARDEAU.

S. Thornton Langley Has Bonded a Group of Properties.

S. Thornton Langley is back from an eight-day trip to the Lardeau country and Cariboo creek, and reports that there is a great deal of ore being taken out of the mines in both these sections. While away he bonded a group of three claims—the Ophir, California and Oregon. These are located on Pool creek in the Lardeau country at a point 14 miles from Lardeau City, which is on the north end of Upper Arrow lake. An assay of Ophir ore gives 1.32 ounces in gold, 346.4 ounces in silver and 11.8 per cent copper. The group was favorably reported on by J. J. Griffith, mining expert. There are two leads running through the three claims. One lead is 20 feet wide and lies between lime and slate. There are several pay chutes in this lead of high grade ore. The values are carried in the chutes, which aggregate from 18 to 20 inches in the lead. The other lead is 12 feet wide with walls of lime. The ore in this vein contains more lead than the other. The group is west of the Hunter and Trapper and Wide West groups, and east of the Black Bear and south of the Diamond Nell property. The group was located in August last by George Goldsmith, Robert Mc-Dowell and I. M. Citron. Goldsmith bought out his partners' interests and he in turn has now bonded the group to
