

Beautify and Protect Your Property

Peerless Ornamental Fencing accomplishes two great purposes. It beautifies your premises by giving them that symmetrical, pleasing, orderly appearance, and it protects them by furnishing rigid, effective resistance against marauding animals, etc.

Peerless Ornamental Fencing

is made of strong, stiff, galvanized wire that will not sag. In addition to galvanizing, every strand is given a coating of zinc enamel paint, thus forming the best possible insurance against rust. Peerless ornamental fence is made in several styles. It's easy to erect and holds its shape for years.

Send for free catalog. If interested, ask about our farm and poultry fencing. Agents nearly everywhere. Agents wanted in open territory.

Wawell Steel Wire Fence Co., Ltd.
Winnipeg, Man.—Hamilton, Ont.

It Helps make the
Housework Easier.

Massey-Harris Cream Separator

Has large Skimming Surface.

The Improved Split Wing distributes the milk uniformly to the Skimming Discs.

The Bowl and all its parts are heavily Nickel-Plated over Copper—Easy to Wash and Rust-Proof.

The inside of Frame surrounding the Bowl is White Enamel.

The Self-Balancing Bowl reduces vibration to the minimum.

The Gears run smoothly and easily and are well protected by Shields.

Bowl is separate from the Spindle.
Effective Oiling by the Splash System.
Low, Non-Splashing Supply Can.

A Reliable Speed Indicator
makes it an easy matter to
maintain a Uniform Speed.

Massey-Harris Co., Limited

Head Offices—Toronto, Canada.

Montreal, Moncton, Winnipeg, Regina, Saskatoon,
Swift Current, Yorkton, Calgary, Edmonton.

—Agencies Everywhere—

Better Butter— Bigger Profits!

If you wish your butter to be smooth and uniform, use the

"BRITISH" Butter Worker

Adopted by the best dairies in Gt. Britain and Canada. Makes the butter firm—even-consistent all through. Results in better butter and bigger profits!

Sold by dealers everywhere.
Three sizes—14 in., 17 in., and 20 in. wide.

MAXWELL, LTD.—St. Mary's, Ont.

SALE OF PURE-BRED HORSES

RE Clydeville stallion offered at the Avondale sale of hankers and Clydesdales on April 20 is a bay stallion in condition would weigh a ton, a beautiful bay, black and white mane and tail, bred by Baron Odrie, a prize winner in England, and his dam was by Lord Painsley. He is a horse of extreme beauty and has left some beautiful colts in this district.

Fligrave Royal John, the hackney stallion, has for a sire Walden Square John, a horse imported to North America some years ago, by Senator Alverca, the greatest hackney breeder in the province who was he was champion for three years. His dam was by the great old stallion, His Majesty. Fligrave Royal John has immense action, speed and courage. He is first in Toronto in the mile and a half in very strong competition with Mr. Towner's horse. The fact that he is imported by Hon. Mr. Beith should be enough to mark him as an exceptional horse. The fact he was imported will show the value of this stallion.

We also offer Thimbletop, Hackney stallion, 132, is by Sir Horace, his dam was Thimbletop Yema, who was first and champion at London a few weeks ago, as very her dam and also her dam's dam. This pony has tremendous speed and action, is a beautiful bay and of the finest quality. He sold at Sir O. Gilbert's sale for 170 guineas as a yearling (1878).

A pair of two-year-old chestnuts by Fligrave Royal John are beautiful youngsters that should make a fine matched pair. Of the pure-bred hackney ponies we can only say there are seven of them running from 12 to 14 hands, two being a pair of matched brooms. Every one of these ponies is a show ring pony, two are by Champion Torbore, which won the championship at London a few weeks ago, and two are by Whitegate Dwell, one of them a show pony of the highest quality. There is a beautiful 10-year-old brood mare, dark chestnut, great style and action, imported by Hon. Mr. Beith; she has a fine foal by Royal John at foot. See advertisement of sale elsewhere.

THE APRIL CROP BULLETIN

THE following is a synopsis of the April crop bulletin of the Ontario Department of Agriculture, based upon information furnished by a large staff of correspondents under date of April 15. Fall wheat in November was described as never more promising. At present there is no cause for anxiety, as so far the condition of the main crop, but late new fields are the least promising as a result of open weather in the latter part of March.

Clover did not make a good catch in 1914, especially Eastern Ontario, and more or less heaving has occurred as a result of open spring weather.

Rye has come through the winter better than either wheat or clover. Fruit trees have not suffered much from the winter. Fruit bushes have come through in good shape, but some late respondents speak of injury to strawberries where not mulched. Horses at a class have come through in good shape, though a little thin, owing to farmers being spending their feed. Cattle also have come through in good condition, but those too saw a little of the winter weather. It is stated that farmers are holding on to their cows in the dairy country, owing to the good prospects for feed and the more calves are being retained than formerly. Sheep wintered well, lambing is coming strong. The general conclusion is after this winter's experience, that "it always solves the feed problem."

Increased Production
Correspondents are not unanimous regarding the response to the call for a larger production. A few are optimistic against the movement, fearing overproduction with a lowering of prices, but the great majority of those reporting believe in endorsing the Production and Production idea, and it is certain that there will be a substantial gain in the quantity of most of the commodities raised this year on Ontario farms.

Fall wheat already shows a decidedly increased area. More fall plowing has been done, much of it with old and while this may mean an increase in grain (especially of oats) and of corn, it will also mean to some extent less pasture. In the country districts smaller acreage will be devoted to supplying the factories and more attention to the dairy business. The cheese season will be earlier than usual, and this will require an increased production of milk, and consequently a greater consumption of feeders.

Several correspondents point out that some of the gain in crop production will come not so much from an enlarged area as from a better selection of seed, a more careful preparation of the seed-bed, and more thorough cultivation of the ground. They say that poor seed and poor tillage have been responsible for much of the poor yields of the past.

One drawback to farm crop development is the lack of competition. The dairy is offering fairly freely, but it is not in quantity. Not only in field work, but in the orchard and the stable, the farmer has taken hold of many, and the year 1915 promises to be one of the busiest in the history of agriculture of the Province.
