Peptogenic Milk Powder

Peptogenic Milk Powder by a physiological process makes the caseine of cows' milk soluble and digestible like the albuminoids of mothers' milk, and gives a food for infants which is practically identical with the food that Nature provides under favorable conditions.

The method of preparing the food is simplicity itself—first making a mixture, next keeping it warm for a certain length of time, then raising it to boiling point, or to only 165°-170° F.

The Peptogenic Milk Powder and process afford a method of infant feeding that is sound in theory and successful in practice.
