TABLE 1 Average Earned Incomes

income (unless he has private means) is less than half, and the Civil Servant's less than two-fifths that of the average man.

The average man is, of course, an abstraction whom we meet as seldom as we enjoy an average spring. On the other hand, the "Median" man, or the one who has as many below as above him, is a real personality. His income, therefore, probably gives a truer idea of the economic position of the graduates. The median earnings are shown in Table 2. These figures are much lower than the averages since the latter are unduly raised by a limited number of exceptionally high reported incomes.
