- Twenty-eight publications in the Alberta Teachers' Alliance Magazine. Four of these articles were based upon a three-years' investigation involving almost daily work in the Grade I classroom. The study related to the development of ideas concerning the number system and to the advisability or otherwise of postponing the introduction of symbols until the pupils had learned more about number. Three articles relate to diagnosis of difficulties of Grade IX pupils in learning algebra. These reports were based upon individual diagnoses and much oral questioning of pupils. Most of the articles concern arithmetic. Every article on this topic is a report of investigation.
