One who simply The action of gunpowder when fired has been studied by a number of sciendence of any more thought than the ma tific men of eminence during the past century and a half. Their opininions chine he operates or the tool he uses, will never advance a step. A man is importhave varied greatly as to the force of the explosion. Recent estimates, as of his uses, and the exercise of his think given by Prof. Abel, F. R. S., rate the ing powers only will enable him to utilize pressure developed by the explosion at his valuable resources. There are also to or y-two tons per square inch—the be considered methods of thinking and powder being fired in a space equal to limitations to thought as business cons its own bulk. In the early part of the ations, which require distinct treatment.

Condition of the German Peasants.

In many German villages, where the

seventy pounds to the square inch; but common land has been gradually parcelled in small bits, the farms of the peasants are square inch! Count Rumford, one of the greatest of American scientists, farms which contained two hundred shch strips. Baring-Gould, in his Germany, made gunnery a special study, and from his experiments concluded that the places the owner of twenty hectares pressure must reach six hundred and (about fifty acres) will have some one sixty-two tons to the square inch! Other estimates have been made, varythousand bits of land distributed over the whole surface of the parish. Such is the ing from ten to a hundred and fifty case on the Main and the Middle Rhine."
The lots of land are too small for pastur-A curious physical phenomenon is age; universal tillage drives the price of endosmose, which is the inward motion grain so low that farming is not profitable; of a fluid, through a membraneous or while the extra labour necessitated by porous substance, into a vessel contain- having land in so many small lots place ing a different fluid. This principle the peasants at a great disadvantage, has been industrially applied to the Legal difficulties and conservatism prevent treatment of molasses, and in certain processes of tanning, while it may serve to concentrate alcohol in membraneous the peasants into the hands of the Jews. to concentrate alcohol in membraneous In each village there are Jews who are reservoirs. It is believed that it may continually watching the distresses of the farmer; they induce him in every way to some day be largely employed in concentrating useful principles diffused borrow money; and when they once have through large quantities of other sub-hold upon him he seldom escapes. Two stances or products, in removing inju-rious matter, etc. To encourage ad-ruinous rates of interest, are often suffistances or products, in removing injuvance in this direction, the French cient to overwhelm him. The Jews seize Society for the Encouragement of his land, and sell it out in small parcels at National Industry proposes to award a high prices, as contiguous owners are prize of one thousand francs, in 1882, anxious to enlarge their plots. Some of for an industrial application of endos-mose. the meanest specimens of mankind are found among these village Jews, and their severity often causes ontbreaks against them. The landed class sympathize with The effort of Prof. Bell to locate the ball in President Garfield's body by the peasants in their difficulties; and this means of an electric induction balance, explains in a measure the present agitation is fresh in the memory of all. Another against the Jews, in Germany. Even plan for detecting metallic substances in the human body has been submitted the Jews; his sympathies are with the by Prof. B. to the French Academy of Ianded aristocracy, and he dislikes the rise to power of the mercantile and money-Sciences. The method is as follows: A fine needle is inserted near where the lending classes, of which the Jews are the ball (or other piece of metal) is supposed to be. This needle is connected by so deeply involved in a serious outrage wire with one terminal of a telephone, committed on the property of an obnaxious while a metallic plate laid on the skin Jew that he was forced to leave the vilis connected with the other terminal.— lage. He confessed that his acts were When the point of the needle reaches foolish, but pleaded in excuse the loss of when the point of the needle reaches the ball, an electric current is set up between that and the metallic plate, we have a sound in the telephone. producing a sound in the telephone. lands on loans at excessive interest. A The needle may be inserted in several bad year followed, and the peasant was places with little pain, and the pain may be prevented entirely by means of ether spray. To test the method, a ball third of the loan in spirits. The natural was placed in a piece of beef, when it consequences followed; the peasant drank was proven that contact of the needle too much; his crops were poor; his inter with a piece of bone, produced no sound est was not paid and his land was seized in the telephone, while a very distinct by the Jew. The Jews are a harsh but sound was heard whenever the ball was eached.

Deaf and dumb people may be taught

system of "small-lot farming:" they
bring the owners of "lot farms" into their o speak with greater or less facility; power, and then sell the lands to those and M. Fe ix Hement has lately noticed whose farms are in larger lots, and who the fact that individuals thus taught are therefore prosperous. Historical reasons have caused the small-lot system to acquire the particular accent of their exist only among the rich lands of Geracquire the particular accent of their native province. Being deaf, this accent cannot have been acquired py imitation, and it is, therefore, inferred theless, the poverty of the soil has made that such peculiarities of speech are due the condition of the peasants in the north to an arrangement of the vocal organs worse than that of those in the south of Germany .- December Atlantic. According to Prof. Young, the total quantity of light emitted by the sun
