### HOLSTEIN-FRIESIAN NEWS

Farm and Dairy is the official organ of the Canadian Holstein-Friesian Association, all of whose members are requested to send their names to the Association are invited to send their notices to Holstein breeders for publication in this column.

### WM. HIGGINSON'S HOLSTEIN SALE

Never before have Holstein breeders or would-be breeders in Canada had the opportunity of purchasing Holstein cattle of the richest blood and to the opportunity that will be their benefit. The great sale at Inkerman Village. The sale called for Tuesday, November 1st, Mr. Higginson's Holstein sale, which was what was thought to be typhoid fever, has recovered sufficiently to warrant him in going on with the sale as first planned for November 1st.

In addition to the information concerning the cattle as published in Mr. Higginson's advertisement on page 10 of this issue, Farm and Dairy readers will be interested to know something of the performance of the Canadian Holstein herd of Holsteins. Cows offered in this sale have 14 months produced over 17,000 lbs. of milk and 108 in one lactation period. One of the cows to be sold in Mr. Higginson's sale is Francine 2nd's Bloss No. 342. This cow gave 37,294 pounds of milk in 14 months and made \$28.78. In 12 months she produced 15,551 pounds and made \$19.95. The dam of this cow is a sister to Francie 3rd, the Canadian champion (Canadian bred) cow that produced over 29 pounds butter in seven days. Another 5-year old, "Altha Poche," is 15,107 pounds in 11 months. She produced two heifer calves three days inside of a year, and for this offspring in 1909, she produced 15,107 pounds. Mr. Higginson has many others equally as good, and they are as well bred as any that can be produced in Canada.

Mr. Higginson has been breeding cattle for 39 years, and has met with great success. On account of Thanksgiving Day half fare rates will be in force on all railways. Hence a most favorable opportunity to see one of the greatest herds of Holsteins in the country. To witness the largest sale of Holstein cattle ever held in Canada is before the readers of Farm and Dairy. Tell your neighbors about this great sale, and if interested in Holstein cattle, take a trip to Inkerman with you for Tuesday, November 1st. Catalogues and full particulars can be had on application to Wm. Higginson, Inkerman P.O., Dundas Co., Ont.

### HOLSTEIN NEWS

During the period from May 16th to June 15th, 1910, records for 161 cows have been accepted for entry in the Holstein-Friesian Advanced Registry, four of which were exported to 14 days and nine to 30 days. This herd of 161 animals, which were one-half were heifers with first or second calves, produced in seven consecutive days 66,264 lbs. of milk, including 2,561 lbs. of butter fat, thus showing an average of 1.41 per cent fat. The average production for each animal was 415 lbs. of milk, containing 14.08 lbs. of butter fat, equal to 58.8 lbs., or over 23 quarts of milk a day, and 16.4 lbs. of the best of commercial butter a week. The report for the last fiscal year closed that year with large averages, so this first report of the new fiscal year opens the year with averages proportionally as good as every successive year in the history of advanced registry work has shown a gain over the preceding year, we may confidently

expect the present year to prove no exception to the rule. The Holstein-Friesian cow factory is a wonderfully organized dairy machine, having limited as to productive capacity, but with those limitations as yet unknown, and no man, no matter what extent of experience he has had with the breed, would be rash enough to undertake to set limits to what she can accomplish. Her fatty acids are the hands of her breeders; and who can say that it is not reasonable? This the attention of owners of Holstein-Friesian cows may that is not called to the changes made, at the last an

### Nothing to Sell

One of the greatest stumbling blocks in the path of the successful breeder of dairy cattle is advertising his stock. Business success along this line depends upon two things; first, producing the cattle; second, selling them at the best profit. The one is just as important as the other. The man who has the best herd of cattle in Canada, but has not a market for them is hardly making a business success. Many a young breeder has said when asked to advertise his stock: "Why should I pay money for advertisements when I did have cattle, but all the surplus is gone now."

Upon the very face of things this looks like sound judgment, but at a second glance its fallacy is apparent. The man who keeps his name in the minds of farmers—the man who would keep his list of prospective purchasers growing—the man who wishes to establish himself thoroughly in the field of milk and cream, to compare favorably with his friends, who are devotees of the same breed—will do well to keep his name constantly before the public by the use of the permanent advertisements.

That is why advertisements of leading successful breeders appear in Farm and Dairy columns, week after week, although this stock may be sold out. They know that it pays to advertise and to keep on advertising in order that they may hold the place they have won through advertisement and it will pay you well to do so.

It must be borne in mind, that a few years reported during the present fiscal year six day interval; but that the tests were begun prior to the adoption of the amended regulations regarding the interval between the testing of the cow and the beginning of the official test has been changed from "not less than four days" to "not less than six days," and that for all cows beginning a semi-lactation, 1910, or not less than two day monthly official test is required.

It must be borne in mind, that a few years reported during the present fiscal year six day interval; but that the tests were begun prior to the adoption of the amended regulations regarding the interval between the testing of the cow and the beginning of the official test has been changed from "not less than four days" to "not less than six days," and that for all cows beginning a semi-lactation, 1910, or not less than two day monthly official test is required.

Kindly send me two copies of Farm and Dairy instead of one as heretofore. The paper and one copy is not sufficient. —E. P. Oeler, Halton Co., Ont.
