HOW TO KEEP WELL

BY JOHN W. S. MCCULLOUGH, M.D., D.P.H., CHIEF OFFICER, OF THE PROVINCIAL BOARD OF HEALTH.

WATER SUPPLIES FOR TOWNS AND CITIES. SAFE WATER SUPPLY for a town or city may he secured from artesian wells, springs, lakes, or streams, provided that certain well-defined rules regarding the source of supply are followed. Artesian Wells usually give a safe supply unless the well is sunk in fissured rock which may provide a coannel liable to carry pollution to the well. If the well is sunk through clay, sand, or gravel, as is commonly the case in this country, the water will as a rule be of good quality. Any chance of contamination should be guarded against by having the sides of the pipe for any four or five feet from the top encased in concrete, the top securely closed against outside impurities and the sections of the pipe itself acrewed together.

itself screwed together. Unless the area whence a spring drains is protected against surface Dnless the area whence a spring drains is protected against surface pollution the tpring is not a very safe source of supply. In addition to the general chances of pollution from the surface, the outflow of the spring should be protected against surface wash. At Niagara-on-the-Lake there are some very good springs in the embankment along the SPRINGS Niagara River. Before encampment of troops on an adjacent common the spring water is on analysis practically pure. Within a very short time after the coming of troops to the camp the water of the springs shows pollution and is unfit for domestic use. Some means of purification is necessary for a supply from springs unless the drainage area is securely protected against sewage pollution. is securely protected against sewage pollution.

It is a popular idea that running water purifies itself and the ardinary observer seems to think that water passing over rapids or falls and exposed to the influence of air and sunlight rapidly loses any sewage pollution it has acquired. There is no truth in this. As an example one may cite the condition of the Niagara River water which after receiving the sewage of Buffalo, Niagara Falls, and other towns tumbles over the falls and is whirled through the turbulent rapids lower down. As a matter of fact the water of this river, despite all the aeration and sunlight it has received, is no better at the mouth of the river than it is above the falls. It is perhaps worse because all that the great falls and swirling rapids have done for it is to mix the sewage more thoroughly with the water. If the same water were placed in a reservoir for thirty days it would be greatly improved, for the reason that time kills the disease-producing bacteria, sedimentation of solids with the bacteria occurs, and sunlight and aeration have some good effect. The bacteria occurs, is good or bad according to the source and surroundings water of streams is good or bad according to the source and surroundings. water of streams is good or bad according to the source and surroundings of the stream. A river coming from an uninhabited mountainous district of the stream. A river coming from an uninhabited mountainous district of the stream. A river coming from an uninhabited mountainous district is apt to be of good quality since it is not subject to contamination by the sewage of human beings, which is, after all, the real dangerous form of sewage of human beings, which is, after all, the real dangerous form of pollution. If on the other hand the stream has its origin in populous pollution. If on the other hand the stream has its origin in populous agricultural lands, or if it flows through a district closely peopled agricultural lands, or if it flows through a district closely peopled agricultural lands, or if it flows through a district closely peopled are water will very likely be unsafe for use in its raw state. In many inwater will very likely be unsafe for use in its raw state. In many instances, however, such water may be readily purified and made fit for use. Some streams are turbid, that is they carry mud or sand in suspension; others, notably those having their origin in peaty swamps, are colored others, notably those having their origin in peaty swamps, are colored others, notably those having their origin in peaty swamps, are colored others, notably those having their origin in peaty swamps, are colored others, make the water unsightly, they may not render it dangerous. Human ties make the water unsightly, they may not render it dangerous. Human perage, let us repeat, is the dangerous ingredient of polluted water.

Many urban centres take their water supply from lakes. These are subject to the same forms of pollution referred to in connection with streams. The supply of streams and lakes is maintained by the rain and snowfall which drain to them and which in the course of drainage often carry impurities found on the surface of the ground. In addition carry impurities found on the surface of the ground. In addition to the sewage impurities carried from the land the boats carrying on navigation contribute a good deal of human excreta. This is more dangerous in the case of rivers than with large lakes. In large bodies like Lake Superior and Lake Ontario water taken at a considerable distance from the shore is quite pure. In the neighborhood of cities or large towns which frequently pour untreated sewage into the most convenient water, the supply from lakes must be effectively freated in some manner in order than the supply from lakes must be effectively freated in some manner in order to make it safe for bousehold purposes,

GERMAN OFFICIAL

Berlin, Nov. 27 (via Sayville)-German and Austro-Hungarian troops under command of Lieutant-General Krafft Von Delmensingen, advancing on both sides of the River Alt, in Wallachia yesterday, pushed back the Roumanian forces beyond the Topolog River, says the official statement issued to-day by the German army headquarters. The text of the statement reads:

************ "Front of Archduke Joseph: I the Carpathians, a Russian noitering detachment in the Ludov sector was repulsed, as were several battalions north of the Negrasora Valley.

"German and Austro-Hungarian roops of Lieut.-General Krafft Von Delmensingen, advancing on both sides of the Alt from the north, forc-London, Nov. 27 .- "Our artillery ed the enemy behind the Topolog secwas active last night in the neight tor, East of Tigveni, Saxon infantry official report from the Franco-Bel- by Newmark field artillery regiment gian front. "Otherwise there is noth- No. 54, which for a quick effort took positions immediately in front of th enemy, which broke through the hostile lines and cantured from the enemy ten officers, 400 men and 7 ma chine guns.

"In the Vedea sector, Alexandria was reached on both sides and the town captured.

"Our troons from Turnu Severing pushed the remainder of the Roumanian Orsova group towards the southeast. Other forces in that direction are blocking their way. The defeated enemy, besides sanguinary casualties, has lost here up to the present six steamers and 80 barges, which are in our hands, most of them with valuable cargoes. "Army group of Field Marshal Von

Mackensen: Hostile attacks carried out in Dobrudja by Russian cavalry and infantry were failures. An advance by Bulgarian battalions re-pulsed the enemy, in front of our positions east of Ercheseo. "The Danube army is advancing in Roumania. The resistance to us is breaking."

Roumanians in Retreat

By Courier Leased Wire Bucharest, Nov. 27 .- via London 11.51 a.m.—The Roumanians have retired from ine line of the River Alt, the war office announces. The Roumanians also have retired a little to the east of the Topolog

The Topolog is a tributary of the Alt, into which it flows at a point about forty miles south of the Hungarian border, below Rothenthurn Pass. It runs parallel to the Alt over most of its course, about ten miles east of that river. This section of the front is northwest Bucharest, and its abandonment by the Roumanians was forced by the Austro-German advance further south, flanking the Alt line.
