Men's Wool and Cashmere Half Hose.

Black & Heather mixtures. 80c., \$1.00, \$1.10, \$1.20, \$1.80 pair.

Marshall Brothers

Dr. Grenfell's Work.

WHAT HE IS DOING FOR THE HARDY FISHERMEN OF INHOSPITABLE LABRADOR.

The following letter taken from the New York Times, under the above caption, is republished for the information of all those who have knowledge of the work of the Grenfell Mission, as well as for the benefit of others who are not so well informed on this subject. It will be noted, however, that Mr. Greene is careful and accurate in his statements, and obviously gave much thought to the preparation of the letter before sending it to the journal from which it is now reprinted.

On Aug. 17 THE NEW YORK TIMES published an editorial entitled, "Familiar News From the Labrador." The writer commends Dr. Grenfell's work and supports his plea for immediate assistance and relief in the form of both food and clothing for the needy fishermen and their families in the North. This same editorial concludes, however, with the following statement: "It does seem that the experiment of settlement in a region so inhospitable to civilized men has been unduly prolonged. The dwellers there serve no purpose of any appreciable importance to themselves or anybody else. Almost continuous hardship is all they can expect, and too often what they get is death by cold and starvation combined. They are so few in number that if the money spent in rescuing them from the rigors of their land and climate had been used in establishing them where nature is kinder, we should have been deprived of Dr. Grenfell's admirable books and he of an enviable record."

To this paragraph I wish to take exception from the standpoint of an eye-witness. It has been my privilege to travel extensively up and down the coast of Newfoundland and Labrador. I have served—in a volunteer capacity—as private secretary to Dr. Grenfell for two seasons, visiting with him all the fishing villages of Northern Newfoundland proper, cruising on the little hospital ship Strathcona, and only this week after twenty long years of hard service. Let me remind the writer that life in Labrador is not as recent and unsuccessful an experiment as he would have us believe. Cabot discovered Newfoundland and claimed it for the British Crown in 1497. Captain George Cartwright opened a post of the Hudson's Bay Company, perhaps the oldest established

fur business on the North American Continent, in 1670, at Cartwright, Labrador. White men have been living in this small corner of the earth, and making the best of it, for more than three hundred years.

The field of Dr. Grenfell's work includes the northern peninsula of Newfoundland, comprising the districts of Green Bay and St. Barbe, with a resident population of some 47,000 people, consisting mainly of the descendants of English, Scotch and French pioneers, who went there for the fishing; also the Canadian Labrador, comprising a stretch of nearly 800 miles of coast line from Natashquan to Blanc Sablon, in the Straits of Belle Isle, with a resident population of over 2,000 white people of the same extraction, and from the Straits of Belle Isle northward on Labrador itself (controlled by the Newfoundland Government) to Cape Chidley, where there is a population of some 3,000 more, made up of the descendants of English and Scotch fishermen, together with some Eskimos and Indians. During the Summer months the population of the Labrador is increased by thousands of fishermen and their families, who live on their schooners during the fishing season. These last are Newfoundlanders, Canadians, French and Americans.

When Dr. Grenfell first came to this coast in 1892 he found an honest, simple people, totally lacking medical and surgical skill, largely un-

educated, and with but few schools, earning by diligence a precarious living through fishing, tanning and sealing, and carrying on their trade largely by a system of barter. The question whether this population, resident and transient, is worthy of the money expended upon it is one which Dr. Grenfell, his associates and the Directors of the International Grenfell Association have often asked themselves. But the answer seems to be that this is a sturdy, self-reliant people, who are unhappy when taken away from the coast, and who contribute out of all proportion to the numbers

to the wealth of the world in food and furs. The estimated value of the fisheries of this coast in the year 1920—the latest figures I possess—amounted to \$18,000,000, or over 2,000,000 quintals of cod and salmon, certainly a substantial contribution to the essential food contribution of the world. Attempts have been made to place part of this population en masse in other localities, but they have invariably failed. It is to be noted also that the 200 young men and women who have left the Labrador and Newfoundland Coasts to be educated in the United States, Canada and England with the assistance of the Grenfell Mission, with a single exception, all returned to work among their own people.

As to the promise which this work holds for the future, it might be stated that already, as a result of Dr. Grenfell's work, a marked economic change for the better has taken place in the conditions among these people. Schools have been established, two Children's Homes are now in operation, one in Newfoundland, one in Labrador, the contribution of the people themselves to the Grenfell Hospitals have been increased, and the foundations for a better industrial development and better social conditions have been laid.

To-day, when the trend is toward centralization in the cities, it would seem that any enterprise which tended to keep people in a country where

their sturdy qualities and their personal resourcefulness are developed is worthy of consideration and support. It is difficult to overestimate the value to the world of the type of men which life under these conditions develops. Labrador and Newfoundland contributed nearly 9,000 fighting men to the British Army and Navy in the World War. The object of Dr. Grenfell's work from the beginning has been to help these people to help

themselves. And he is doing it. Speaking of one among hundreds of men and women who have seen Dr. Grenfell's work at first hand and approved it, I believe that the facts more than justify the experiment, and constitute a challenge for future support. THEODORE AINSWORTH GREENE, Chairman, Executive Committee of the Movement to Perpetuate the Work of Dr. Grenfell. New York, Oct. 10, 1922.

A Little Wisdom.
The parent's life is the child's copy-book.
A contented mind means a cared-for body.
To rude words the best attitude is deaf ears.
A little fore-talk would save much after-talk.
The sharpest reproof is contemptuous silence.
Expectation is no justification for expenditure.
Each time you yield to temptation you lose power.
The wisest habit is the habit of never being foolish.
Don't criticize if you cannot stand your criticism being criticised.

Stafford's Liniment
An invaluable remedy for Rheumatism, Neuralgia, Headache, Bruises, Sprains, Soreness of the Joints, etc.
DIRECTIONS:—Apply by the hand, rubbing it in well then cover with a piece of flannel.
BE PREPARED and keep in the house a bottle of this reliable antidote.
FOR SALE EVERYWHERE.
Manufactured by
DR. STAFFORD & SON,
Chemists and Druggists,
St. John's, Nfld.

YOUR TOILET!
Is not complete without a touch of Hudnut's beautiful Three Flowers Face Powder. Just the correct natural shade of this delightful and fragrant powder.
