## IN FIRST AID WORK

St. John Ambulance Corps Work Staged by Phone Company Teams.

Brantford's entry in the final divisional first aid contest of the Bell Telephone center of the St. John ambulance corps scored the highest number of points at the contest held in the cen tral collegiate auditorium last night.

Six teams, all winners in the elimina the Bell Telephone Co. The contest consisted of a series of problems in first-aid work, comprising bandaging o all kinds of injuries, including fractures, burns, severed arteries, and re the victim of the accident and it was upon him the work was done. Speed nd accuracy marked the performance of every team and it was a question which one was the best until the

## BRANTFORD SCORES Dorchester Peat Has High Ash Percentage

Comparative analysis of American anthracite coal, a sample of Dorchester peat and a sample of peat from the bogs at Portadown, Ireland, shows considerable variance in fuel qualities. It will be noted that the Dorchester squerable variance in fuel quanties. It was believed that the amount of fixed carbon is low. The table below represents a typical analysis of American anthra-

	American Anthracite.	Irish Peat.	Dorchest Peat.
Fixed carbon Volatile matter Moisture Ash	50.	44.60	24.14
		35.32	34.95
		18.98	18.65
	10.	1.10	22.25

## tion contests, were entered from the six divisions of the western division of the Bell Telephone Co. The contest SOUGHT AT DORCHESTER

each case one member of the team was Analysis of Sample From Middlesex Peat Bogs Provides Encouraging Reports of High Carbon Content-Compares Favorably With Irish Peat—Drying Process Simple.

A sample of the fuel, taken from bogs owned by Dr. J. McWilliam at pletely burned, gives only 4,450 units borchester, was analyzed this week by when the combustion is not complete. R. Osborne, E. L. Smith. The St. Thomas team was the representative Prof. J. W. Russell and G. H. Reavely, of the geological department of the Kitchener and Stratford tied for third University of Western Ontario. The result of these tests, conducted through W. J. Hodge, W. U. Cooke, A. A. Gale The Advertiser, has given decided impetus locally to interest in the fuel situation.

The analysis definitely establishes the fact that peat possesses all the me-chanical and heating properties of the anthracite coal, which is used to such an extensive degree, and

Smoke Brings Loss.

Not only is there a large waste the heat value of many coals, due to the loss of gases containing unburned carbon, but with the lower grades of coal especially, considerable amounts of Brantford for one year. The members of the winning team were also prosented with shaving outfits as souvenirs proper conditions in either stoves, furnaces or grates, is practically smoke-less, and the consequent loss of unconsumed carbon in gases thus formed is exceptionally small, owing to more complete combustion.

Actual heating results obtained from any element, therefore, depend to an unlimited extent upon the completeness of combustion, and the results of Prof. Russell's analysis show peat to contain 24.14 per cent of fixed carbon. The amount of volatile, or gaseous matter, contained in the sample amount-ed to only 34.95 per cent, which is a comparatively small proportion in relation to that contained in many varieties of anthracite and non-bituminous coal. The moisture content of the peat sample amounted to only 18.65 per cent

while the amount of ash contained was but 22.25 per cent. In forming an estimate of the comtomary method of basing it on the ultimate analysis of the fuel is sometimes misleading and does not fairly represent the real value of the subtance. The result of a sometime to an air drying, but to develop Associated Press Despatch.

Paris, Dec. 17.—France is suffering from the most intense cold spell in thirty years. The thermometer in Paris showed it to contain 44.60 per cent moisture, 35.32 of carbon 18.98 per cent moisture, 35.32 distributing and spreading, extensive only to send four telegrams about the care of sending and does not tarry simple and natural plotted to develop tion and air drying, but to develop a telegram from Cincinnati, on the first transfer and the drain plotted at the first transfer and the first tra

Samples of peat taken from bogs at pudges' decision was made.

The Brantford team finished with a cording to reports today, qualities of figures would indicate, owing to the figures would indicate, owing to the fact that more perfect combustion of fact that more perfect combustions are more perfect combustions. H. Dresher, captain; H. H. Cooper, V. Morrison, J. C. T. Jefferies and R. Smith.

Thomas came second with a score

A semple of the fuel taken from the coal would be obtained under working conditions.

This is due to the fact that a pound of carbon giving 14,600 b.t.u., when com

Peat Retains Heat. One of the outstanding properties of peat is its power of heat retention burns with a much smaller air sup ply than coal, and this directly affects heat losses, through the necessity of employing a greater draft to burn coal. According to tests, the total loss in the dry chimney gases, in best practice, averages more than 25 per of the total heat generated from the

burning of coal. tain), F. F. Heffernan, W. T. English, J. H. Westman, W. D. Smith.

The Bell Telephone orchestra of this try furnished a splendid musical proram during the intermissions. Other ambers included two solos by Another element of much practical slate and other impurities as to give poor results. Therefore, while tests of clean coal may show a fuel of high grade, the heating value of the entire shipment from which it is taken may be much lower.

In the burning of coal under ordin ary conditions a high percentage of the fuel value is often lost in the form of fine coal, clinkers and ash shaken through the grates, in order to keep the fire open to an air supply The loss on this account in the burnng of peat is vastly less. Requiring less draft, it does not need frequent shaking, and combustion being prac-tically perfect, no clinkers are formed, residue being a fine white ash, which drops through the openings

in the grate bars. Peat, when taken from the bog, contains about 90 per cent of molecure. but it can be dried by the ordinary open-air method during an average drying season, to contain less than 25 per cent, at which content it be-comes an efficient fuel. This is to say that ten pounds of raw peat will produce 1½ pounds of peat fuel. 8½ pounds having to be got rid of. Thus, to produce 133 pounds of fuel, 1,000 pounds of the raw peat are required.

Drying Method Simple. "It is a comparatively easy matter," per cent volatile matter and only 1.10 drying areas and mechanical drying de per cent voiathe matter and only 1.19
per cent of ash.
Theoretically, one and a half tons
of this peat would equal in value the
same amount of coal containing 11.43
British thermal units. In real practice,

## TRAVELLERS' VOTE **NEARLY COMPLETE**

Officers of O.C.T.A. Will Be Named at Annual Meeting on Saturday.

On Saturday afternoon of this week the new officers for the Ontario Commercial Travellers' association will be made known when the report of the scrutineers is heard at the annual meeting of this body in its rooms in the Dominion Savings building. The meeting will start at 3 o'clock.

The scrutineers, E. J. Dawson, J. F. Kern and W. R. Grant, have been receiving ballots from the members for the last month or so and these are now

at the last meeting in November will be her husband. Lord Cheylesmore has a heard. One of these, that dealing with ranch at Happy Valley, Alberta.

without any person other than the officials in charge of the work, knowing anything about it. It is the purpose of the committee in

charge of this fund to build it up so that activities in this field may be greatly enlarged. They are desirous of being able, at some time in the not too far distant future, to help the widows of deceased members, and to assist in the education of orphans. It is expected, with the large membership and the very generous response which is made yearly, that this will soon be possible

A letter stressing the need of support in this work has been mailed to all nembers during the past few days. It says: "Your permanent relief com-mittee is again appealing to you on be-half of the charitable work of our organization. During 1924 we received onations amounting to \$1,310, being an increase over the previous year, but if our work is to be continued in a real way we must have a greater number of our members contribute.

"It is our desire to build up a fund that will not only take care of indigent cases, but will enable us to help the widows and orphans of our deceased members, in distress. We have many aged members of very limited means. If we supplied their winter's fuel, could you measure their gratitude? Why not get in the game in a real way? Why not help to educate the orphan? Even with our limited funds, we could en-tertain you with stories of relieved distress that would make you feel proud that your association is engaged in such service. Our members receive much—special privileges, insurance, prestige, Let all give one dollar.

"The following trustees have full powers of administration of the fund: Past presidents W. R. Grant (chairman
