## TOWN BILLS UNDER DISCUSSION

Bill to Allow Issue of Debentures Agreed to As Amended.

Fredericton, N.B., April 8.—The House in committee on Friday afternoon agreed to bills relating to the village of Bodney, to amend Municipality Act relating to the Town of Newcastle, to authorize the town of Sackville to issue debentures, to amend the act incorporating the town of Moncton, and an act to enable the board school trustees of the city of Moncton to issue debentures.

The committee next went into consideration of a bill relating to the town of Campbellton, and some amendments thereto recommended by the municipalities committee. The bills ask authority to issue debentures to the amount of \$250,000.

Mr. Martin having approved of the issue of debentures by a plebiscite, and also of the vote election subsequently held, had a right to know why the bill had been amended.

Mr. Richards said that he understood that the promoters of the bill favored the amendment as it stood. He had personally drafted the amendment at the request of one of the members for Restigouche.

Mr. Hayes said that the amendment was based on the recommendation of the members for Restigouche. He was not aware that any question had been raised as to the illegality of the plebiscite.

Mr. Martin said that the change had been made in the bill without the town authorities of Campbellton having been consulted. This did not seem to him to be right.

Hon. Mr. Michaud said that the committee had heard a delegation representing both sides of the question and had afterwards decided to make the amendments.

Mr. Martin said that when the delegates from the town returned home they were under the impression that the bill would go through as originally drafted. Now the committee had been informed that the change had been made on the recommendation of the two members for the county.

## How to Grow New Skin!

Nothing is more wonderful than the human skin. It breathes through its pores called pores. If it is kept whole and strong it improves the entire body health.

Those who know most about the complex structure of the skin appreciate the fact that must be taken in deciding what is the safest, purest and best dressing to apply in time of accident or disease.

Much scientific thought and experiment was expended in the search for an ideal natural healing substance, but it has actually been found at last, in Nature's own storehouse of medicinal herbs.

Never in the world's history has there been another preparation like sun-buk. Amongst other virtues, it possesses that rare quality of actually growing new skin in Nature's own way.

**A MIRACLE BEFORE YOUR EYES.**

Healing the injured and diseased tissues by this precious herbal skin is a miracle that may be performed before your own eyes.

Children remember sun-buk best for its great power in soothing and healing their burns, whilst in the treatment of eczema, ringworm, chronic sores, ulcers and poisoned sores, sun-buk powerful antiseptic and tissue building properties ensure success; again, many thousands have sun-buk alone to thank for their complete release from torturing piles.

Differing fundamentally and in action from all ordinary ointments, sun-buk is free from animal fats and mineral compounds. It is highly refined and contains no ingredient which the skin cannot readily absorb. A fifty-cent box of sun-buk may save you dollars in doctors' bills. It is a unique preparation with a wonderfully wide range of usefulness.

**Is Now a Healthy Boy**  
"From a puny, delicate child, my little Johnny has become a strong sturdy boy."

One father writes:—"If you had seen my little Johnny four months ago and you were to see him to-day, you would never believe that he is the same boy. Then he weighed only 40 pounds, to-day he weighs 80 pounds, almost double what he weighed four months ago.

His trouble first started with a cold, which we never noticed because he was strong and like all boys of his age occasionally caught cold. After a while he began to lose his strength, instead of getting better, was getting worse, until he was looking pale and losing weight. He seemed to be tired all the time, had no energy to do anything. Before he caught cold he had no trouble with his lessons and remained at the head of his class without much study. But we began to notice change. He didn't seem to care whether he knew his lessons or not and nothing seemed to interest him. He coughed so much and so hard at times that his face would become purple and he would surely burst a blood vessel. Medicines and coughing did not help. He was in a state of desperation and as a last resort, we tried Carnel. In a short time his cough had almost disappeared. His appetite was returning and he was beginning to take an interest in his studies. And, thanks to Carnel, he has become as strong and healthy as he has ever been.

Carnel is sold by your druggist and if you can conscientiously say, after you have tried it, that it has not done you any good, return the empty bottle and he will refund your money. 1-122

## DEMONSTRATION OF NEW TRAIN STOP

Mr. G. H. Metzler's Invention Tested Before Officials; Movies Taken.

"Necessity is the mother of invention" and by reading newspaper accounts of railroad accidents last Mr. George H. Metzler, of Halifax, but formerly of this city, and a son of Mr. W. A. Metzler, Union Street, to invent his silent signal which may be the means of hundreds of lives being saved from needless accidents.

Mr. Metzler has spent two years on this invention and on Wednesday afternoon demonstrated it before a number of railway officials and interested citizens.

The test which was made Wednesday proved to be a decided success.

An engine which had been fitted up for the test, pulling three heavy passenger coaches, was used.

The device is an upright of iron which is clamped onto the top of the rail by means of hand turned clamps. The upright supports a vertically placed metal bar and a socket for the danger flag. The whole device weighs about nine pounds and stands about 30 inches in height. It is so constructed that the flagman can place it in position in less than one minute. On the pilot of the engine was placed a 16 inch lever in the air valve and when the vertically placed rod on the device comes in contact with the lever on the valve, the force of the collision automatically opens the air valve and at the same time causes the breaks to work on the entire train and throwing the iron signal clear of the track.

Two tests were made, the first with the train travelling between 15 and 20 miles per hour. In this instance the train was brought to a standstill within the length of the engine and two cars. The second contact was made at the speed of approximately 30 miles per hour, the engine working steam when it struck, and a full stop was effected within the engine length and four car lengths.

It is pointed out that the advantage of this new signal is that it eliminates the possibility of the engineer failing to see signal lights, or hear torpedoes intended to warn him of danger at night. If he fails to see these in an emergency the train plunges on to destruction but with the new signal in position, that is impossible, as it brings the train to a quick halt whether seen or not.

It was an event that attracted much attention and Mr. Metzler was much encouraged by the demonstration and wishes to thank the officials for the kindly way he was treated and who made the demonstration possible.

In discussing the invention with a Transcript representative, Mr. Metzler stated that the new device if adopted would not do away with signals now in use, but would be a big boon in foggy and stormy weather. He stated that the device on the pilot of the engine was not a temporary one as the proper valve could not be applied in time for the test. Nevertheless the temporary one was highly successful and did the work required of it.

It is pointed out that the iron frame of the device may be struck with great force and not hurt.

Mr. W. G. MacLaughlan, Halifax, the Photo News photographer, was present and secured pictures of the occasion for his company.

Mr. Metzler has demonstrated his invention before the Exhibition of Railway Appliances in Chicago.

General Superintendent J. C. O'Donnell and many prominent local officials witnessed the test in Moncton on Wednesday. Transcript.

## REINVIGORATING THE BRITISH RACE

Duke of Devonshire Points Out the Attractions of Canada To Britishers.

London, April 7.—The Bishop of Birmingham, presiding at a meeting convened by the National Council of Public Morals to discuss the reinvigoration of the British race, said he regarded emigration as one means to the desired end.

The Duke of Devonshire dwelt on the attractions of Canada and declared it was important that there should be a greater influx of Britishers to Canada than at present.

**Incredulity.**

"Monroe says he was in the biggest battle of the war."  
"Ah, he's such a liar I wouldn't believe he was there if I saw him there myself."

**Nothing Unusual.**

"Excuse me, thirty-seven, please, write in capitals, would meet lady of like qualifications, matrimony."

**KING COLE TEA**  
Mother Knows  
"Just how" to make a really nice cup of Tea ---no one better.  
Let her combine her skill with the unusually rich flavor of KING COLE TEA. Not a doubt about the result.  
"You'll like the flavor."

While in London recently a Dublin man thought he should be charged. He regarded it thoughtfully. "Do you happen to know the significance of that red-and-white-striped pole in front of your shop?"

## All This is Yours for \$1585

It is, as we all know, a well-established fact that the motorist who has once owned a good "Six" can never again be contented at the wheel of any car with a less capable power plant.

In our belief, this preference is based only in part on the additional power provided by the greater number of motive impulses. Fully as fundamental is the comfort of mind and body which results from the association with a competent, smooth-working, inherently balanced mechanism.

If your driving experiences have been largely with four-cylinder cars, there is a great treat in store for you. Just nestle down behind the steering wheel of a Jewett and put it through the same tasks you ask of your "Four."

Your first surprise will come from the speed and smoothness with which the starter spins the motor. "Sixes" do start easier, quicker and with less battery drain.

Now go through your gears and see how willingly each change is followed by an immediate, unlabored increase of speed.

Push out your clutch and coast around a corner. Then, without racing the motor, roll away by accelerating

merely to car speed before re-engagement.

Pick out a grade up which your "Four" labors, vibrates and begs for mercy. The Jewett makes play of the climb and keeps steadily gathering speed all the way up.

Seek the thick traffic and see how, when an opening offers, your Jewett fairly leaps past the stolid vehicles that would hold back a less spirited car.

Now for the open road, and let the Jewett have its own way with it. Instinctively you begin searching for the vibration point which long experience has taught you marks the limit of a "Four's" comfortable speed.

You will seek this point in vain. From 3 clear to 60 miles an hour, the fifty horse power Jewett will do its work not merely without protest but with real joy and zest.

And there, in the last analysis is the charm of this superb Light "Six." A car that never seems to toil! A car, therefore, that imposes neither labor nor weariness on its driver!

By all means see to it that your next car is a "Six." Once that decision is reached, your path to the Jewett is plain and straight.

The Touring Car \$1585, f. o. b. Windsor
