Products/Services

Purified protein standards

Current Export Markets

U.S.A., Europe, Asia, Latin America, Caribbean

Company Summary

Founded in 1981, Helix Biotech Corporation is engaged in scientific research, development, manufacturing and marketing of quality diagnostic components and systems for use in the clinical, veterinary and aquaculture industries. The company is a worldwide supplier of immunodiagnostic products for professional use. Helix Biotech's systems use enzymes to produce a simple colour change to indicate test results. Current production includes substances used by manufacturers of diagnostic test systems for the early detection of infections, cancers, birth defects and malfunctions of the thyroid gland and liver.

Products/Services

Beds • Stainless steel and aluminum cabinetry
• Swivelling casters of conductive and non-conductive rubber • Portable wheelchair lift

Current Export Markets

U.S.A.

Company Summary

Heli-Fab Ltd. specializes in weldments, sheet metal fabrication, heli-arc welding and precision computer numeric-controlled (CNC) punching, primarily on non-ferrous metals such as aluminum and steel. Founded in 1977, the company operates a 1,890-square-metre (21,000-square-foot) manufacturing facility and employs 63 people. Heli-Fab offers a wide range of products for the aerospace, communications, medical and transportation industries. Working closely with the National Research Council, the company developed its wheelchair lift, which is designed to improve access to buildings for the handicapped. Heli-Fab's non-magnetic caster is used in the medical industry for computed tomography (CAT) scan tables.

Products/Services

Financial and patient care software for hospitals

Company Summary

Founded in 1984, Heron Technology Corp. is a private Canadian firm specializing in the production and implementation of application software for the hospital marketplace. Applications include the financial and patient care areas and are implemented on departmentally-based microcomputers connected by a local area network operating under the Unix operating system. The costs associated with this distributed data processing approach are said to be considerably less than those incurred by hospitals equipped with a central mainframe computer.
