

ISSUES IN ENGINEERING EDUCATION

PRESENTED BY:

DR. T. H. BARTON, P. ENG.
DEAN OF ENGINEERING
UNIVERSITY OF CALGARY

LES PROBLÈMES DE L'ENSEIGNEMENT TECHNIQUE

DE:

T. H. Barton, ingénieur
Doyen de la Faculté d'ingénierie
de Calgary

the result of government action in the case of public utility projects. More attention should be given to private utility projects. However, improved attention has been given in the past. However, improved attention cannot be expected to dispose of the problem of the shortage of trained engineers in the case of public utility projects. More attention should be given to private utility projects. However, improved attention has been given in the past. However, improved attention cannot be expected to dispose of the problem of the shortage of trained engineers in the case of public utility projects.

As more sophisticated design and construction management and control systems are introduced, the non-engineering expertise which can be used will increase rapidly. We will then see the number of engineers required to design and construct a project will increase. As more sophisticated design and construction management and control systems are introduced, the non-engineering expertise which can be used will increase rapidly. We will then see the number of engineers required to design and construct a project will increase.
