ONTARIO EXHIBIT VERY INTERESTING

Government Shows Possibilities of Agriculture in Northern Section.

ALL BRANCHES ON VIEW

Work in Fruit, Bees and Vegetables in Fine Display.

This year's exhibit of the Ontario Government is creating more interest than in any of the past years of the Canadian National Exhibition. Their display of the agricultural possibilities of the province and especially of the new districts recently opened up in northern Ontario has elicited many enquiries from visitors who heretofore had not conceived that northern Ontario could grow such abundant crops.

The territory of northern Ontario extends over 330,000 square miles. Intending settlers will do well to investigate the wonders of this great agricultural belt with its exceedingly fertile soil and equitable climate. Some settlers in writing the bureau of colonization have described the climate as invigorating, health giving and glorious.

Fine Fruit Display.

The fruit exhibit from all parts of Ontario is one of the finest displays which have ever been shown at any exhibition in Canada.

P. W. Hodgetts, who is in charge of this branch of the exhibit, has arranged a splendid display of all the early fruits. Large varieties of the yellow St. John peaches and Clapps' pears are an exceptional attraction. The grape crop has been late this year, but many varieties of Ontario grapes will be shown during the last week of the fair. The later varieties of peaches and pears, such as the Elbertas and the Bartletts, will also be shown next week.

Specially preserved fruit prepared by a specialist in the department is one of the things to be carefully noted in connection with the fruit display. The fruit is put up in large glass jars, and takes over nine weeks of the specialist's time before it is ready to withstand the action of decay.

Most of the fruit has been secured from the Ontario Government's demonstration orchards in many parts of the province.

The field crop exhibit of northern Ontario is one which never fails to attract those interested in the science of agriculture. All of the grains have been grown this year, and excellent specimens of fall wheat, barley, oats, peas, fallow spring rye, timothy, flax and many grades of clover are deserving of particular mention. The selections have been made from the territory north of Haileybury to Cochrane and west from Cochrane to Hearst. Greater interest in these northern crops has been shown this year than ever before. The roads are nearly all built in the districts where the settlements are growing.

This year the government made a distribution of seed grains to the settlers, and the increased acreage has been tremendous as a result. It was felt by some dubious settlers that fall wheat could not be successfully grown in the northern districts, but this doubt has subsided now, for many farmers have planted this grain extensively this year. A lot of hay has been sold by the settlers, and a great deal of it ran more than four tons per acre. The wheat has yielded 30 bushels to the acre. The oats are exceptionally good and yield as high as 75 bushels to the acre.

Varieties of Vegetables.

Every variety of vegetable may be grown and the English bean is specially suited to the soil.

The field crop competition, which is open to the competitors all over the province, was well contested, and the judges had a difficult task in making their awards. The exhibit of the grains is most satisfactory this year considering the wet weather.

The average yield of wheat was 35 bushels, oats 55 to 60 bushels, and barley 45 to 50 bushels per acre. The men who exhibited wheat in bags are to be specially complimented on the excellent quality secured.

The exhibits from the Ontario Agricultural College are attracting a great deal of attention from many visitors, who make a special trip to the government building to see the products of these institutions. An instructive lesson in the many branches of agriculture is given by members of the staff of the college at Guelph. There are special attendants in charge of such departments as field husbandry, botany, entomology, chemistry, physics, botany, etymology, chemistry, physics, bacteriology, horticulture, apiculture and poultry.

Exterminate Weeds.

The extermination of the three worst weeds, the bladder campion, the field bind weed and the perrenial sow thistle, is a special feature of the botanists' department. Insects which are injurious to fruits, such as the San Jose scale, the codling moth and the railroad worm, are shown. Insects which affect vegetables, and household insects are also on display.

Illustrations of the principal varieties of cereal grains in glass bottles, showing the principal varieties of wheat, oats and barley in the sheaf are most interesting. The results of seed tests are shown in glass tubes, and the height of grain in the tube represents the comparative yields. Results of sowing grains in mixture are shown in the same manner. The mixture of oats and barley gave the largest yield per acre. Seeding spring wheat as soon as the ground can be made ready in the spring produces the greatest yield per acre.

It is shown that it is quite feasible to grow seed plants in Ontario of mangolds and carrots.

The raising of bees and poultry is one of the special departments of the exhibit which is most commendable.

SCORE'S CLOTHES.

If you desire style and variety at the price we would advise you to note our a-1 on page 5.

Women's Club Raises Fund.

The Canadian Business Women's Club is collecting funds from its members to buy a motor ambulance and field kitchen for the boys at the front. The treasurer is Miss Margaret Pennell, care J. J. Gibbons, Limited, 119 West Wellington street.

SOUTHERN PALMS SPLENDID PICTURE

Information and Pleasure in Seeing Jamaica Exhibit at the Fair.

EVOLUTION OF PANAMA

Occupation of Natives Illustrated in Government's Fine Display.

Visions of palm-trees and orange groves rise up before the visitor to the Jamaica exhibit in the Government Building at the Exhibition. It is one of the spots that afford information and pleasure along lines unfamiliar to our national environment and the delight of novelty is one of the attractions.

The products of the palm as shown in the evolution of the panama from the shredded leaf on thru the weave into the summer headwear always durable and in its best phases almost immune from the wear and destruction of time, are seen in large variety. Fruits as represented by the cassava, tamarind, mangoes and the cashew—a fruit that grows surrounded by beans—are all on view. Baskets of thatch-palm illustrate one of the native industries.

A sample of fustic is of special interest this being the dye used in the production of the khaki used in the military uniform, Logwood, satinwood, ebony gru-gru-nut and cocoanut, are among the collection.

Specimens of seeds mostly used for ornamental purposes, such as the mimosa, accasin and cucoon are subjected to much inspection on account of their attractive variety in color. The Imperial Department of Agriculture is distributing a book entitled "West Indies in Canada," edited by Francis Watts, C.N.G., D.Sc., which contains much information on the interesting group of West Indian Islands.

EDISON CATERS TO CANADIANS.

Thomas A. Edison, the noted inventor, of Orange, N.J., has sent five of his personal representatives to Canada for several months to demonstrate to prominent organizations his new Diamond Disc Phonograph. Mr. Edison takes greater pride and more interest in this, his latest invention, than in any of his achievements, and he believes that it is only by actually hearing this instrument that a true conception of its marvelous accuracy can be appreciated. For this reason he has sent men all over the United States to play his instruments for the people without obligation or effort to sell, merely to show the world what has been accomplished in sound reproduction.

These men will be at the Exhibition for the next two weeks in an exhibit specially designed for the occasion—opposite the arts building—where the public are invited to go and hear this wonderful instrument.

FRENCH CITY OBSERVES GERMAN ANNIVERSARY

Senlis Has Simple Service to Commemorate Citizens Executed by Huns.

SENLIS, France, Sept. 3.—The anniversary of the German entry into this city and the execution of Mayor Eugene Odey and 17 citizens was commemorated yesterday with a simple ceremony. After a religious service at the cathedral the people of Senlis gathered before the soldiers' monument in the cemetery and listened to addresses in which tribute was paid to the heroism of the mayor by Deputy Mayor Deparseval and Deputy Paisant.

Exceptionally appetizing and attractive is the display of fruit, fish and vegetables now on view on the premises of Gallagher & Co., Limited, whose exhibits contain American and Canadian products that cannot be excelled anywhere on the continent.

The fruit section shows pears, peaches, plums, grapes and cantaloupes, all of tempting appearance and quality. Beautiful Canadian peaches, in large and small baskets, are on hand at reasonable prices. In the vegetable line the head-lettuce, sugar-corn, yellow Bantam corn and other products in season are admired on account of their size and freshness.

The fish department is unique in its variety, containing soles, sea salmon, chicken halibut, Lake Ontario white fish and trout, fresh oysters in pint and quart tins and beautiful live lobsters.

Everything is shown under most sanitary conditions and visitors to the Exhibition, as well as general patrons, are invited to visit the stock at 107 East King street, where every courtesy will be shown them. Phone Main 7497.

C.N.R. TO COMMENCE COAST TERMINALS

Sir William Mackenzie Makes Announcement at Vancouver.

VANCOUVER, B.C., Sept. 2.—Work will be commenced shortly on the Canadian Northern Railway terminals here, according to statements made by Sir William Mackenzie, president of the company, who arrived in Vancouver this morning on a special train. The money for the work, the president stated, was lying in the bank ready for use. Sir William stated that he was not certain as to when the company would commence a train service, but he expected it would be some time next month. The company, he declared, was willing to agree to a union depot. Arrangements had been made for the present to use the Great Northern Railway Co.'s depot.

If the facilities were here this winter to handle it, Sir William stated that his company would be in a position to haul wheat from the prairies. He expressed the opinion that it would be just as easy to take part of the crop this way as any other.

There is at the present time something over 7700 miles of the Canadian Northern lines in operation in various parts of Canada, with another 1250 miles ready to be thrown open for traffic. With the opening of this additional section a continuous line of railway will be operated by the company between Port Mann and Quebec.

Sir William Mackenzie and his party traveled over the company's own lines practically the entire distance between Winnipeg and Vancouver.
