30	Thu.	50	20	51	19	3 53							
31	Fri.	47	21	49	20	4 16							

MARCH.—After so many years of experiment it may seem strange that there would yet be a doubt as to the best soil for growing potatoes. For years the largest portion of potatoes designed for the market was grown on sandy soil. The City housekeeper rejected such as were produced on heavy lands. It is now known that these same lands have produced the very best and driest of potatoes. There is a quality called the peerless which, grown on sand, is poor and watery, but on a rich loam becomes large and mealy. For Early Rose the soil cannot well be too rich. The Peach Blow and Late Rose may be too heavily manured. Experience demonstrates that naturally or artificially drained heavy loams is the very best soil for potatoes.
