FISH. Dry cod are higher, with old large and new medium selling at the same price. There is no movement of pickled fish, and stocks are light. Dry pollock are easier, and large catches are reported over the bey. Salmon and shad are cheaper, the latter being very plentiful last week, and gaspereaux are also lower. Fresh macketed are how offered more freely. Halitax advices state that the dry fish market there is firm.

Although one of the refineries advanced granulated sugars 1-16c on Saturday, the market here is unchanged as yet. Advices from Montreal, New York and London indicate great strength in the sugar market. Molasses is very firm, the feeling here being confirmed by the latest advices from Barbados and Porto Rico. A cargo of salt is now landing here. The tobacco market is wery firm. One large maker of Canadian leaf advanced prices 2c last wek.

| LUMBER. | | | |

LUMBER.

It is impossible to give a quotation on spruce deals, for there is as yet no buying of any importance, so very few tessels being in port to load. One dealer said on Saturday that he thought about \$\\$3\$ or less was the buyers' idea, hile another said he thought \$\\$3\$ to \$3.50 was the rarge, but he would not sell to the shippers for less than \$\\$9\$, and he expected to get it a little later on. Last week a cargo of over three million feet cleared for Manchester, one of nearly a million for Buenos Ayres, another for Delfzyl, Holland, and about a million and a quarter feet of long lumber, a few millions of leths and shingles and nearly 2000 pieces of piling for the United States. Only one steamer and two or three square rigged vessels are at present loading here.

FREIGHTS.

The ocean freight market continues firm, and coastwise dull.

THE EIGHTY WHO SUFFER

In Every Hundred from Catarrh Have a Friend Indeed in Dr. Ag-new's Çatarrhai Powder.

"I was a catarrh victim for many years. Dr. Agnew's Catarrhal Powder has done for me great service. I tried every remedy in the category of catarrh cures without any permanent relief. After taking only a few doses I received great benefit, and in a very short while my catarrh had disappeared. I am satisfied it is the best, safest and quickest remedy for this malady today." Jas. E. Bell, Paulding, O.

The running stream drives are past and the twitching drive is opposite here today. All the lumber will soon be safely in the boom.

Rev. Mr. Clements had a crowd at work on Monday clearing up and fencing the Methodist cemetery. The ladies turned out as well as the men and much assisted them in the work of decoration. Tea was served on the

The newly appointed Presbyteria ergyman, A. F. Robb of St. John. filled his first appointment here on Sunday evening last. His sermon leased a large and appreciative congregation. Mr. Robb will be ordained at Doaktown today.

W. T. Sharpe, station agent, who recently became the possessor of Fred A. Duffy's trotter, is putting him in condition to meet all comers. The mercury rose to 80 degrees in the shade here vesterday.

CASTORIA

For Infants and Children

DESTINY OF BRITAIN.

A Sermon by Rev. Dr. J. V. Smith

At the Hamilton, Ontario Centenary Methodist Church.

The Thirteenth Regiment, Fourth Field Battery and the Veterans of Ridgeway paraded for divine service yesterday morning at Centenary

Rev. Dr. Smith took as his text Josiah xix. 23-25. He said: This passage points to an ideal condition of things, and certainly looks beyond any immediate or local realization. It is no part of the divine programme that nations shall exist as so many hostile groups. Chronic antagonism is not heavenly design. Nor is national isolation any part of the great purpose running through human history. Hermit nations like China and Thibet are being compelled by the force of current events to play their part in the solemn drama of history. The day has come when nations cannot live unto themselves. Reciprocity with other peoples and tongues is the portal through which rations must pass to a higher development and destiny. This reciprocal intercourse is designed and necessitated by the very dispositions of climate and soil. Ethnological traits also indicate the esity for international intercourse if the race is to realize the fullness of its happiness and power. The old adage reminds us that no man is a whole man. In each individual some thing is lacking which makes society necessary to us. So no one nation is a whole nation. It has limitations and deficiencies which other people must supply. Through successive generations history reveals the fact that nations have enriched each other in art, literature, language, jurisprudence, science and religion. In all this it is quite clear that the divine idea points to the brotherhood of man.

Nations are not to be exclusive but

fraternal. Poor old China is a pa-

thetic object lesson on the folly of Hy-

Looking at the gigantic armies and navies of the great powers it would almost seem as if the prophet's vision would never be fulfilled when nations shall beat their swords into ploughshares and their spears into pruning hooks. Yet strange as it may seem, the immense scale upon which our national defences are carried out may tend vastly more to brotherhood than strife. Said a great statesman, when looking at the 35 miles of British armorciads gathered in the Solent in connection with the Queen's diamon'l jubilee: "That means peace." But the peace to which the prophet's finger pointed is not to be brought about by the instruments of material force alone, but by the teaching, spirit and life of the great Nazarene. The unifying power of the race is not to be sought for in 13-inch guns and Whitehead torpedos, but in the undying principles embodied in the Sermon on the Mount. It is only as a great faith changes the spirit of man that the tragic discords of earth be the crowning glory of the nineof peace. Isaiah has a wide horizon, and Paul still more so-they are both entranced by the splendid vision of international unity wrought out by the Prince of Peace. How much has our own nation to do with bringing about this ideal condition of things? There is a Providence that shapes the ends of nations as well as individuals. Egypt and Assyria, Greece and Rome were agents in the hands of God. What's the mission and destiny of the Anglo-Saxon today? I am persuaded that John Milton was not far from the mark when he said that it was to teach the nations how to live. I am aware that the finger of scorn is sometimes pointed at the smallness of the British Isles in presuming to claim, a world wide mission, but any careful student of history will have no trouble in calling up plenty of examples to show that God often influences vast spheres from small points. When an engineer wishes to accomplish his most splendid effects, he does not grasp crowbar, but presses his finger on a button; the question is not the surface touched but the power released. Hence, when an engineer in international diplomacy, like a Salisbury or

upon the globe feels the shock and instantly recognizes the purpose and rower behind the touch. Has the Anglo-Saxon a destiny; if so, what is it? Events are transpiring with such rapidity that it is sometimes difficult to determine where we ere. The closing years of the nineteenth century are naking history on a scale so vast that it cannot fail to leave its impress upon the ages following.

plain Joseph Chamberlain, places his

finger on the button of Britain's po-

tential power, every civilized nation

God is unquestionably bringing the Anglo-Saxon to the front, and placing in his hands the leadership of the race. Since the days of Alfred the Great He has been training him for the tremendous issues of the twentieth century. Our language, our literature and civil institutions, our spirit of adventure, our passion for commerce, our genius for colonization, our capacity for tasks that circle the globe are national gifts divinely bestowed, all of which clearly point to a great destiny. Moreover, is there not something in the fact that there is in the Anglo-Saxon an unswerving fidelity to his highest moral convictions, which has kept him from falling under the deteriorating influence of rationalism and practical infidelity to which so many of the Latin peoples have succumbed? We have an open Bible, an evangelical creed, and a genuine enthusiasm of faith. The beneficence of British rule is everywhere acknowledged; we have not carried tyranny and oppression into lands which have come under our care, like the Turk, the Spaniard and the Moor. Nations which, in their ignorance and insolence, or both, sow the seeds of injustice, cruelty and crime, are doomed to reap a harvest of national humiliation, weakness and shame. Wherever the flag of the Briton has been planted, it has always meant freedom, expansion, growth, justice and the best

interests of all. God has not given them, but that we may serve them— empires as India, or such magnificent stretches of territory as we hold in Africa ,that we may exploit or crush them, but that we serve them-empower them, and lift them up to the high plane of modern civilization. Throughout the wide sphere of imperial influence, the Anglo-Saxon is to be a blessing and not a bane—a benecent uplifting power. 'Tis true, our aspirations and assumptions may provoke the smile of the cynic, nevertheless such aspirations are well buttressed up with a magnificent background of facts, as e. g., Lord Cromer's last annual report of England in Egypt will abundantly prove. It is a fact upon which patriotism can squarely and solidly plant its feet to know that Great Britain controls eleven million square miles of territory and three hundred and eighty-one millions of people. It is some thing to think about that when this century was born only about twenty millions spoke the English tongue; today it is spoken by one hundred and twenty millions. Bishop Thoburn, who has

lived long and traveled much between the province of Travancore and the Himalayan ranges, asures us that if England controls the destinies of India for half a century longer, English will very largely be the speech of her three hundred millions. Both French and German philologists are willing to admit that English is destined to become the world language. All this is freighted with tremendous significance to the Anglo-Saxon. Our danger seems to lie in our slowness to perceive the trend of modern movements, and measure up to the responsibilities which are pressing upon us. Mr. Curzon, the under secretary of state, winds up his interesting book on "Problems in the Far East" with the suggestive quatrain:

We sailed wherever ship could sail. We founded many a mighty state; Pray God our greatness may not fail Through craven fears of being great." Whether we vant it or not, great-

ess is being thrust upon us. If we refuse to carry the burdens which greatness involves, then our mission ends. A few days ago Lord Salisbury spoke of what he called the dying nations; but he did not forget to remind us that such nations were non-Christian, though not exclusively so, The Anglo-Saxon race does not belong to that class. It is the most vigorous nation of which we have any knowledge. Like a mighty banyan tree, its branches overspread the earth. Its virtue, its courage, its genius and its force is known and

read of all. The world is full of unrest today, and men are looking out into the future with mingled hope and fear. And yet, somehow, the conviction grows stronger and stronger as the years roll by that somewhere there is a power which works for righteousness and peace. The idea is in the world today to go out no more for ever, that the reign of right is destined to overturn the long years of

wrong. A great wrong is now being written and said about an Anglo-American alliance. If such an alliance could be satisfactorily arranged, it would event, the largeness of whose meaning the inferior breed and not enough of no living man could tell. Therefore, I for one hall with unmixed delight any agency or effort that will hasten on the day when English-speaking people the world over shall stand shoulder to shoulder in a holy alliance against oppression, injustice and wrong on the one hand, and for peace and international brotherhood on the other. Should such an alliance come to pass in the near future, then possibly the parliament of man and the federation of the world of which Tempson sings in his "Locksley Hall" may not be so far away after all. Peace and not war will I believe be the programme of the twentieth century. The awful passion for carnage and strife is dying away. The burden of European armaments is crushing out the very life of the nations. There are more "Weary Titans" than one beyond the mighty seas. Across the swirl and storm of the ages the world is loooking for the white-winged dove of peace. This world for ages has been a veritable mouth of hell, but the smoke of its torment is rolling away. Its desolations and miseries are coming to a perpetual end, and brotherhood and peace shall cover the earth as the waters the face of the mighty deep. Coming up from the golden age is the song that broke in sweetest music upon the rugged shores of Patmos: "Behold I make all things new and the tabernacle of God shall

be with the sons of men." SUNBURY CO.

SHEFFIELD, Sunbury Co., May 24 -The Rev. B. H. Thomas, a former rastor, preached last evening in the Baptist church at Lakeville Corner. and at the close of the meeting presented very forcibly the claims of Acadia college on the Baptists of his congregation. A counsel of delegates is called to consider the advisability of the ordination of Bro. O. P. Burgess, rastor of Marysville and Sheffield Baptist churches, for the 1st of June. Miss Eliza M. Bridges has returned to her home in Sheffield after spending a few weeks with friends at Hampton. Mrs. M. F. Reld is spending a few days with her parents at Sheffield this week.

Mrs. G. W. Bridges of French lake s receiving congratulations this week on her first born-a son. The Bismarck and Martello

both been towing lumber out of the lakes for a week or two past. Wilmot Upton lost his second horse within a few days, one from the staggers and one from glanders.

The Rev. Charles Henderson has been prevailed upon to withdraw his resignation that he had tendered to the Baptist church in Upper Gagetown a few weeks since.

NOTICE/

We beg to thank our numerous customers throughout the Maritime Provinces for their liberal patronage bestowed during the past fifty years. Owing to our old quarters being too small, we have removed to the large five story brick building No. 11. Market Square, lately occupied by Messrs Mollison Bros & Co. Our new quarters is one of the largest buildings in Canada devoted to

Horse Furnishings, Harness, Collars, and Saldlery Hardware,

Which we offer wholesale and retail at the lowest bottom prices. Hoping to be favored with a call, We Remain Yours Very Truly 684 H. HORTON & SON.

HOGS FOR EXPORT.

The Tamworth and Improved Yorkshire Breeds for Bacon,

Opinions of J. W. Flavelle of the William Davies Co. and Mr. Pakenham of Dublin.

The following article, from an Ontario paper, is of interest in connection with the proposed establishment of pork packing houses in these provinces. James Pakenham, of Dublin, who will attend the meeting in the Board of Trade rooms this evening, said to the Sun that he entirely agreed with Mr.Flavelle's views regarding the best breeds of hogs for bacon purposes.

J. W. FLAVELLE'S OPINION. A few weeks ago a representative of the Weekly Sun interviewed J. W.

Flavelle, managing director of the William Davies Packing Co., in regard to the kind of hogs most suitable for the export bacon trade. Mr. Flavelle's practical knowledge of the bacon trade makes his remarks of value to every swine breeder. In reference to the breeds of hogs best adapted for this trade, Mr. Flavelle said: We are not breeders and do not wish to say anything either for or against a certain hog because of its breed; but as exporters we know that certain breeds produce qualities which enable us to market their products at the best possible rate, and these exceptionally good qualities which prevail in some hogs have a leidency to increase the value of the whole stock. The thoroughbred Tamworth gives us a very desirable class of bacon hogs. We find, however, when these hogs are crossed with what are, from an "exporter's" standpoint, objectionable types, such as Poland Cainas, Duroc Jerseys' Chester Whites, Essex, Suffolks, Jerseys, or other types of Berkshires, that the result is not so good eenth century; It would be an duct shows too much of the type the Tamworth. In contrast to these, we find that the Improved Yorkshire White has a tendency to assert its own individual characteristic in a cross even with the objectionable types I have just nentioned. The Improved Yorkshire is an excellent hog for the packers, and when crossed with infericr breeds, it develops in the progeny its own peculiar excellent features, viz., a lengthy, deep side, an abundance of lean, and a thick belly. One of the greatest needs of the trade from a breeding standpoint, is the introduction of thoroughbred Yorkshire males, for the purpose of crossing with other breeds not so suitable for the packer's purpose. At the present time a thoroughbred Tamworth from 165 to 190 lbs., if properly fed, makes an admirable becon hog. The same can be said of the thoroughbred Yorkslire. The difference between the two is that the Tamworth is not so desirable to cross with objectionable hogs. Generally speaking, what 'exporters require is a lengthy, smooth, deep-sided hog, with well-developed hams, and moderate shoulder and head. If this hog is fed wisely, so as to produce plenty or flesh and a moderate quantity of fat, it will insure the production of bacon for which the best price can be made in England. Mr. Flavelle's remarks on feeding

are to the point and should be particularly noted by farmers. Though it is necessary to have the right type of hog for the bacon trade, it is quite necessary that a proper system of feeding should be followed. No haphazard system will suffice. On this point Mr. Flavelle said: The importance of proper feeding cannot be too strongly impressed upon your readers. Last night's cable shows a difference of 10s. per cwt. between No. 1 selection (lean) and No. 2 selection (fat). That is \$2.40 on each 112 pounds. The average hog will weigh alive about 170 pounds, and will produce about 96 pounds of export bacon; for that 96 pounds, if 't were not for No. 1 quality, \$2 less was secured in Great Britain this week than could have been secured for No. 1. The delivery of hogs this week in Ontario will amount to say 20,000. Six thousand of these will be too fat and their product, if sold in England this week would bring \$2 a hog less than i would bring if the hogs were of the proper class; in other words, there is a loss to the country of \$12,000 on one week's delivery of hogs, because of improper breeding and feeding, resulting in the production of hogs which made bacon too fat to secure the best orice.

Every farmer is interested in this matter. The producers of the best class of hogs lose more or less as well as the producers of the poorer classes. I will show you how. Every packer, in arriving at a conclusion what price he will pay for hogs, has to measure up the whole situation. He recognizes that no matter how carefully he selects his hogs the selection is always against him. When the hogs he buys are killed, he finds many hogs have

fat, many which have been paid for as firm, well-fed hogs, turn out soft or slightly tender, and the product must be sold in England at 5s., 7s., 10s. per cwt. less than best sides, Many, far too many, have been handled roughly, causing loss from bruised sides. Therefore, when the packer is fixing his buying price, he has to strike an average, keeping in mind the above conditions. If we were sure all the hogs sent in would be of first-class quality, as to breeding and feeding, and free from bruises, the average price all round would be put at a higher point. A producer of objectionable hogs, therefore, not only lessens his own profit but lessens that of his neighbor, who produces a first-class article. Unfortunately, we do not come in direct contact with farmers. We receive practically all our hogs from drovers, and hence can only reach the original producers through second hands. Our people are becoming fairly well educated in the matter of breeding. Marked improvement in that line has been made of late years. There is, however, a retrograde movement in the matter of feeding, and the point to be most strongly impressed is the necessity of proper care in this latter matter. Proper feeding at the present time is of equal importance with breeding. We find the most objectionable feeding is done by our best farmers, such as those of Oxford and Middlesex. In these counties farmers have good pens, in which their hogs spend most of their lives. Farmers there also force their hogs in order to get returns in the shortest possible time. We want more of the principle of "root, hog, or die." If hogs are heavily fed and kept confined, they will give the proper weight in five months, but they will be altogether too fat to make proper export bacon. Hogs should not be finished in less

force the animal too quickly, but on the contrary to take time in which to develop a long, strong body. Mr. Flavelle strongly deplored the practice of beating or abusing the hogs. This often causes a loss of from 2s. to 10s. per cwt., when the bacon is sold. From one to hogs received by the Wm. Davies Co. show bruises. He also objects very strongly to the feeding of corn. Where corn is used in connection with the whey at the cheese factories, the reuslts will be disastrous. The whey is all right, but with it should be used oats, barley, pease and middlings, and not corn. By using barley, oats and bran, with a small amount of peas to harden on towards the end of the feeding, the bacon hog can be produced at as low a cost as the fat hog. The Canadian bacon trade has taken leaps and bounds during recent years. We have now obtained a standing in the British market for our bacon, and it would be suicidal on our part not to put forth every effort in the way of breeding and feeding hogs that will supply the right kind of bacon. It is just as easy for the farmer to breed the right kind of hogs as to breed one unsuitable to the trade, and likewise a system of feeding as indicated above that will produce the right kind of bacon, can be carried on just as cheaply and with as much profit as a system of feeding totally unsuited to the

than six or seven months. A good ra-

tion for young hogs is roots and

mixed grain, care being taken not to

ST. JOHN MAN KILLED.

needs of the trade.

Theodore Dooley Knocked off a Moving Train and Killed.

ST. STEPHEN, N. B., May 28.-While returning from work on the Washington County railroad last evening on a flat car on the St. Croix and Penobscot railway, Theodore Dooley was knocked beneath the moving cars and had both legs cut off below the knees. A tall stake struck an overhead bridge at Milltown, Me., and, in rebounding, hit Dooley. The unfortuate man was removed to Calais and died during the night. He was an industrious man, and leaves a wife and children. He came from St. John several years ago. About two years ago he fell into the hold of a vessel discharging coal at St. Stephen and was everely injured.

RICHIBUCTO.

Funeral of the Late Jacob Ferguson.

RICHIBUCTO, N. B., May 28.-Jacob Ferguson died at his residence here on Thursday night after a four days' illness of acute itonitis, aged seventy-four years. The ceased was born in Cumberland county, N. deceased was born in Cumberland county, N. S., and came to Richibucto fitty-four years ago. He taught school for a number of years and then became connected with the business of the late L. P. W. Desbrisay. Later he went into mercantile business on his own account, which he conducted successfully for the last forty years. Five sons and five daughters survice him. The funeral took place this afternoon at 3 o'clock. Service was conducted at his late home by Rev. Messrs. Fraser, Lawson and Meek. The remains were taken to the Presbyterian cemetrry at Kingston, followed by a large procession. James R. Ferguson of St. John was one of the moruners.
