Parsons' Pills Best laxative. Tame the System.

Publications of the International Agricultural Institute.

The new number of the bulletin "The Publications of the International Agricultural Institute" gives the latest data concerning the Wheat, Rye, Barley, Oat and Corn crops of the world.

Estimates of the wheat crop received by the Institute from twenty countries of the Northern Hemisphere (Austria and the Ottoman Empire being the only important omissions) show a total of 3,048,927,000 bushels compared with 3,034,879,000 for the same countries last year.

No estimates have yet been made for the countries of the Southern Hemisphere—Australia, New Zealand, Argentina and Chili, whose harvest will begin in December.

For fifteen countries reporting, the year-crop of 1911 is 1,364,804,000 bushels compared with 1,419,169,000 for the same countries last year.

Estimates for barley in 18 countries show a total of 1,127,838,000 bushels compared with 1,128,121,000 last year. The oat crop of 17 countries so far reported is 2,838,221,000 bushels compared with 3,151,125,000 last year.

The bulletin contains many brief articles and summaries of articles, written by scientific experimenters and others which have appeared in official bulletins and other trustworthy publications issued by the foremost agricultural countries of the world.

References are to the following subjects, which are of peculiar interest: The Karite or Butter-tree grows in Central Africa and from which a veget-

able butter is produced. The tree grows to a height of nearly 54 feet. The butter is made from the fatty substance found in the seeds. The butter has a slight odor of cocoa. It finds a ready sale in European markets.

An item refers to the product of a cross between the tomato and the pepper, known as the peppermato. In appearance, it resembles the tomato. As the tomato and pepper plants are closely related, it is supposed that the tomato blossom was fertilized with the pollen from the capsicum.

It has been concluded by an Italian investigator, who has gone deeply into the study of the form and performance of cows, that the largest production of milk corresponds with the largest girth and the heaviest weight of the animal.

Under the head of Farm Machinery a description is given of an electric wind motor used in Danish agriculture.

The apparatus includes a windmill, a dynamo, a battery with automatic accumulators, a switchboard, and an automatic tension regulator for lighting purposes. The installation expenses for a farm with 40 incandescent lamps and a 3 to 5 horse power motor is said to be about \$1435.

A method of determining the age of eggs is described. It is to float the eggs in a large tumbler of water in which has been dissolved a teaspoonful of ordinary table salt. An egg one day old will fall to the bottom of the glass; if older, it does not reach the bottom. If three days it sinks only just below the surface and the older the egg, the more it protrudes above the surface of the liquid.

The Longevity of Birds

In reading the Proceedings of the Zoological Society of London for 1911 we have been interested in the ages attained by many of the birds mentioned. Of course it is only the exceptional bird that reaches the extreme age indicated, just as it is only the exceptional man that lives to be eighty or ninety. We give only a few of the birds spoken of in the volume referred to above: Ravens have been known to live to be 69 years of age; nightingales 25, skylarks 24, goldfinches 23, canaries 20, the American robin 13, an eagle-owl 68, a gray parrot 93, a sulphur-crested cockatoo 81, an Amazon 102, a white-headed or Egyptian vulture 118, a golden eagle 104, pelicans 31, common herons 22, a black stock 30, a mute swan 70, a domestic goose (authorities somewhat doubtful) 80, wild ducks 29, doves and pigeons from 23 to 40 years, herring-gulls 44, ostriches 55, cranes 50. A peacock now living near Aylesbury is known to be 40 years old.

Dr. Mitchell, the author of the book, who is also at the head of the London Zoological Gardens says, "I think that the most certain general conclusion which I may draw regarding the longevity and viability (capacity of living after birth) of the groups of birds is, that in proportion to size, longevity and viability increase with perfection of organization. The further a bird has advanced along the lines of evolution of the bird group, the more viable it is."—F. H. R.

Every kind word you say to a dumb animal or bird will make you happier.

San Jose, Cal., Oct. 29.—The family of Dr. Thomas A. Perrin of this city, according to advices just received from Bradford, Ont., has established claim to \$4,500,000 in the Bank of England, which has been lying idle for more than two hundred years.

The fortune will be divided among nine heirs including Dr. Perrin and two brothers in Bradford. A sister, Mrs. A. Craig, of North Dakota, gets a ninth share, and two nephews and three cousins, if found, will get \$500,000 each.

A Second Shylock

A good many years ago Marse Henry Watterson, of the Louisville Courier-Journal, and Colonel John R. Fellows, wandering about Washington in search of a little relaxation, came upon a senatorial poker game. They both wanted in but this was a game for big money and they were told to keep away.

However, Marse Henry and the Colonel were bound to get their relaxation, and they organized a two-handed game and played until nine o'clock the next morning.

Then they quit for breakfast. As they entered the hotel dining room Marse Henry said: "John, as I figure it, you owe me a million dollars. Now, John, I'll call it square if you will buy the breakfast."

"Henry," replied Fellows, "you are a regular Shylock. The discount isn't big enough."
