Madame Marton regarded her with un-Madame Marton regarded her with un-feigned astonishment, forgetting, in her surprise at the statement, to be angry at being contradicted, a circumstance which usually made her furious. "Pardon me, but I mean it," Shirley smillngly apologized. "Many of these things were made by poor people in foreign countries; and don't you believe they enjoyed earning the money in this they enjoyed earning the money in this

they enjoyed earning the money in this way more than they would if it had been given to them in charity?"

"I never thought of that before," madame admitted, and looking somewhat perplexed over this presentation of the problem of political economy.

"Any right-minded person would prefer to earn money rather than have it given outright," the girl continued independently. "I love pretty things dearly," she went on, with an eager light dependently. "I love pretty things dearly," she went on, with an eager light in her beautiful eyes, "and if I were rich I would have lots of them. Oh, madame, what if God had made the world with only bare rocks and brown earth! what if there were no green grass, no flowers, no leaves on the trees, no beautiful clouds or lovely colors in the sky! It would be too dreary for anything. Don't you think so?"

"Humph!" grunted madame, but the expression on her sallow face plainly betrayed that she was considering the subject from a standpoint different from that to which she had hitherto been accustomed.

wrong for us to have and enjoy them; indeed. I think we should commit a greater wrong to ignore them, and allow God-given talents to lie dormant. I love a beautiful house and handsome aplove a beautiful house and handsome appointments, soft, warm, rich colors, fine pictures, dainty dishes, and the many other accessories which add so much to the beauty and comfort of life. I love pretty dresses, too," she added, with a mischievous sparkle in her bright eyes, "and since the skill and taste has been given to me to fashion them, I shall always use the most of my ability in that line."

"Well, well, child, you do have an earnest and remarkable way of arguing questions to make them sound very plausible," said the woman, regarding her curiously; "and so I suppose you'd like all this trumpery scattered over the house."

'Indeed I would; but I shall not agree with you that it is 'trumpery,' responded Shirley with smiling eagerness,' and if you do not like to trust the serand you may be sure I will handle them wants with so much costly bric-a-brac, I will gladly get up an hour earlier in the morning and dust everything myself, very tenderly."

"Well, well-have your way," said

madame, with a shrug of her shoulders.
"I reckon that some of the people who gave me the things have thought it rather shabby in me to take their presents and then tuck them out of sight."
And to Shirley she handed the key to the closet as she concluded "Thank you, Madame Marton, ever so much," Shirley replied, her heart leaping with exultation at this concession; then following up her unlooked-for advantage, she asked: "And are you willing I should arrange my own room as I like."

'Of course, child; put as many flowers and gewgaws in it as you choose. They won't bother anybody but yourself," said the woman, turning away as if she had had enough of the subject.

"And so, during the week that followed, Shirley made the most of her privileges. Her first work was to empty the closet of its precious contents and arrange them about the rooms, filling the vases with the choicest flowers that the domain contained, and which the gardener seemed only too happy to cut for her, making the house, even with these slight changes, seem like an entirely different place.
Then, the first time that madame took her to the city she purchased some inexpensive material, and, by rising with

the sun for a week, she managed to complete some dainty draperies for the windows in her room.

This done, she smuggled the gardener and a step-ladder into the house, one afternoon, while Madame Marton was afternoon, while Madame Marton was taking her usual nap, and had them and her pictures all hung before she awoke. She had begged a couple of old willow rockers, which she had found stowed away in the attic, and these, with the help of the same ally, she had cleansed and painted white, while with a pretty blue and white cushion and a dainty tidy for each they proved to be a great

tidy for each, they proved to be a great addition to the room.

The unsightly black marble mantel she draped with a long silken scarf—another home souvenir—and, with a bright throw here and there, and the rich old Indian shawl in lieu of a rug, no one would have recognized the place as the same bare, cheerless apartment to which she had been consigned on the night of her artical

when it was all finished, she filled her vases with fresh flowers and invited madame to come and make her a call.

She had not said a word to her about what she was doing, after having obtained permission to arrange the room as she choose, and so Madame Marton had not given the matter a second thought. Shirley had not failed in the performance of a single duty while thus engaged—she had read her regular hours, she had walked with madame, she had accompanied her upon her drives every afterneon, and so she had used no time that did not belong to herself in thus beautifying her apartment.

woman, with a sharp glance at Shirley's glowing face. "What new scheme have you got on the docket now?" she added, suspiciously.

ded, suspiciously.

"Nothing, only I thought perhaps you would like to see my room; you know you gave me permission to arrange it as I like." Shirley answered, flushing slightly at madame's tone.

She led the way across the hall, and threw wide the door as she ceased The afternoon sun was shining through

Don't Neglect

A Cough.

the open windows upon the handsome Indian shawl, which lay in the middle of the floor, thus bringing out its rich colors to perfection. The two pretty white rockers stood invitingly in opposite corners; the spotless draperies swayed gently in the breeze; the flowers in their vases nodded brightly and exhaled the sweetest perfume; and the whole scene was like a revelation of some other sphere to the sternly practical, narrow-minded woman, who all her life had obstinately persisted in trying to shut out all beauty from her existence.

She stopped short on the threshold and looked about her for a minute without speaking, while her sharp eyes took in every detail of the change before her.

Then she turned to Shirley:

"Child, when did you do it?" she demanded, in a tone of wonder.

"A little at a time during the last week," she replied, with rising color, for she was not quite sure, from the expression of madame's eye, that she was exactly pleased.

"Where did you get those chairs?" was the next query, for the woman had not recognized them in their new dress.

"Where did you get those chairs?" was the next query, for the woman had not recognized them in their new dress.
"They are those old ones from the attic which you gave me leave to take," Shirley explained.
"Those dainty things?"
"Yes; I bought a little can of white paint in the city, and James and I gave them their clean coat one afternoon between sunset and dark," said the young girl, who was determined that she should know the whole truth.
"Humph! The curtains, too, I suppose, are some of your work?"
"Yes, madame."

"Humpn: The curtains, too, I suppose, are some of your work?"

"Yes, madame."

"Haven't you any better use for your money than to spend it in fitting up other people's houses?" madame inquired, with caustic sarcasm.

Shirley began to look troubled.

"I hope you are not offended with me, Madame Marton," she gently remarked; "but I am fond of draperies, and the windows were so tall and bare; besides, the muslin was inexpensive."

Apparently madame paid no heed to these observations, for her sharp eyes were now riveted upon the costly square that lay in the center of the floor.

"Goodness gracious!" she exclaimed, throwing up her hands, and bristling with displeasure at such wanton desecration: "and a thousand dollar Indian shawl for a carpet! Where did you come by such a treasure, and how dare you put it to such a use?"

a treasure, and how dare you put it to such a use?"
"It is an heirloom," said Shirley, flushing hotly beneath this severe censure.
"It was given to my grandmother by a weathly relative, and she gave it to mamma when she died. Of course it came to me when I lost my mother, and I am very careful of it. I do not step upon it at all. I fold it at night and only keep it spread on the floor daring the day. The room is so large and looks as here without anything." the day. The room is so large and looks so bare without anything—"
"Hoity-toity! I've lived on bare floors all my life, and I'm pretty well preserved, even yet," interposed the woman, with sharp contempt. Then she added, authoritatively, and with a peculiar companyers of her thin lips: pression of her thin lips:
"Take up the shawl, fold it, and put it away. Such things were not made to

over floors with."
[To be Continued.]

The Vital Force and Strength That

Gives to the Body Is Apparent to Everyone.

"But, since he has filled the earth with beauty." Shirley resumed earnestly, "since He has shown that it was not too much trouble nor 'a waste' to make an endless variety of beautiful things to charm the eye and please the sensessince He has given people the talent and seriously taste to proceed the common grain foods, used extensively in the past, hampered and retarded digestion, increased nerve troubles, favored Diabetes and Bright's processing the plood, causing invitated the blood, causing The use of Malt Breakfast Food in-

ENGLISHMAN STILL CHAMPION. London, April 23.—At the National Sporting Club, London, last night, Jack Roberts, of England, knocked out Billy Smith, an American, in the eighth The fight was for the ninestone championship of England. Dur-ing the first three rounds everything was in favor of Smith, who showed himself decidedly the more clever of the two men, but for the remainder of he contest Roberts had his own way. and he dealt out a lot of severe body punches. In the eighth round Smith made no attempt whatever to defend nimself. He was twice knocked down and then counted out. Subsequently it became known that his right arm was dislocated in the fourth round, and at the finish his legs were badly cramped. After the fight Smith was removed to a hospital, where he was still unconscious at 2 o'clock this morning. It is feared his injuries will "Billy" Smith, who has received such serious injuries in his contest with "Jack" Roberts, the undefeated feather-weight of England, is a New Yorker, and resides on the east side of Manhattan Island. His fighting artistic tasts to produce other lovely things, I am sure I do not think it is eruptions and skin diseases.

Wrong for us to have and enjoy them; indeed I think we should commit and the blood, causing the Atlantic, showed him to be a boxer of fine promise, and his American of fine promise, and his American friends counted on his defeating Roberts, although it was expected that he would have a hard fight on his hands Terry McGovern had promised Smith match if he defeated Roberts, Smith rounds for a purse of \$800 and a bet of \$1,000 a side. At 5 o'clock this morning Smith was still unconscious.

## FOOTBALL.

FIRST GAME A TIE. Windsor, April 3.-Windsor and Walkerville football teams played the first game of the season of the Pen insular League at Walkerville on Sat-urday. The game ended in a tie 1 to 1.

## TURF.

LONDON HORSES AT BOSTON. A Boston dispatch to the New York Herald says: At the horse show this evening the exhibition of huntbrought an enthusiastic audience its feet spellbound, as amateurs and members of the recogas nized hunt clubs negotiated stiff rush and high timber on their thoroughbreds. As in the morning prewhen twenty-six entries jualified in flying style, so this evening no less than eighteen passed muster in the Corinthian event, the most popular of the entire week. Col. Francis Peabody, jun., who tips the scales at two hundred pounds,

or over, in the early trial on Bamboo got what at first looked like a nasty tumble for a man of his weight, as his horse crossed its feet at the tim-ber and rolled over. His gallant rider, however, slid over the shoulder to United States, France or Germany.

## Mother's Love

Is boundless. Yet it is utterly helpless to give strength to the child born with a low vitality. The time to give strength to the child is before birth and to impart this gift the mother herself must be strong. Dr. Pierce's Favorite Prescription gives strength to mothers. It pre-serves them in robust health in the months before baby comes. It practically does away with the pains of motherhood, and enables the mother to endow her child with a healthy body and a happy disposition. "Favorite Prescription" contains no alcohol and is absolutely free from opium and cocaine.

lutely free from opium and cocaine.

"I consider Dr. Pierce's Favorite Prescription the best medicine made," writes Mrs. Mary Murdock, of 220 Taylor St., Topeka, Kansas. "I know it has no equal. I am the mother of ten children and only one living—the tenth one. She is one year old and is as well and hearty as can be. She is a beauty. Of my other babies, some were born at right time, but dead, others were premature births; one lived to be one year old but she was always feeble. I tried different doctors but none of them could tell what my trouble was. I was examined by surgeons but they found nothing wrong. I did not know what to do, so I thought this last time I would try Dr. Pierce's Favorite Prescription. I took it the entire nine months and now have a fine baby girl, and I can not praise your medicine enough for the good it did me."

Dr. Pierce's Pellets cure heart-burn. Dr. Pierce's Pellets cure heart-burn.

the earth, and, quickly remounting, received an ovation. Young Matthew Maher opened the field on the sporty gray Vengeance, that rushed the jumps, but cleared everything in its stride. Colonel Peabody, on Bamboo, again sailed over all beautifully, but his second mount, Barrister, refused three times at the brush. Then Mr. Mather piloted Welcome over like a bird. Spencer Borden, jun., could not hold The Heiress, and she went madly at

her fences in a manner that made the onlookers hold their breath. SHOWED CHAMPION FORM. Mrs. Pierce put the 17.2 gray Tornado over as if in a rocking chair, and the gelding must have jumped

## EQUIPOISE OF BODY AND MIND

Dr. Cl. T. Campbell's Interesting Address Before Normal School Pupils.

Taught in a Practical Way by a Practical Man.

Dr. Campbell is not only a man of sei entific attainments, but one who has the advantage of being a capable public speaker. The initial number of the course was mainly introductory and personal. To show the importance of the subject, the progress of sanitary science was briefly sketched, indicating the benefits derived from its development. The great plagues that scourged the most civilized communities a few centurie ago, are now scarcely known, except by name; while the span of human life has been lengthened, as shown by the experience of England, which has an annual death rate of 17.5 per 1,000, as compared with 80 in the 1,000 two centuries since. Modern sanitation is based on a knowledge of anatomy and physiology, and the influence on the body of its surrounding circumstances, such as heat and cold, light and darkness, food, clothing, climate, occupa-tion. Every occupation, for example, has its attendant dangers and diseases, which have to be avoided. The special dangers to health for the teacher were those incidental to mental overwork, and a sedentary life—such as brainfag, nervous disease, dyspepsia, anaemia, consumption. Mental labor is not mia, consumption. Mental labor is not injurious; but to preserve health there must be an equable balance of the processes of waste and repair; all parts must be exercised, and all must have opportunity for rest. The muscle worker uses his brain to some extent, as well as his body; and sleep gives him the needed rest for both. But the brain er uses his brain to some extent, as worker seldom uses his muscle; and so, while one part of his system is wear-

issues-their modification involving a division of labor and a mutual dependency. But the fully organized man nothing more nor less than a mass of these cells, each having its own place and work. A man can be compared to a city. The city is composed of individuals; these are continually dying, and the dead must be removed, or the become a source of danger; and new arrivals, by birth or immigration, must take their places. Individually, each citizen is an independent living creature: and if he were entirely alone, would manage to live after a fashion. But united with his fellow-citizens, there is a division of labor, and each takes some special work, and fills some special place, and both the individuals the arrangement. So a man is made up of individual cells, each capable of an their places taken by new arrivals. And the processes of animal life are all devoted to the accomplishment toplasm, modified into vegetable

der to make new cells to take the place of those that die. If new cells are not supplied in sufficient number to meet loss of those that have finished their work and passed away, then weakness, disease and death of the physical and mental strength, of daily work, to seek rest and recreation in change of labor-alternating physical and mental exercise-and to take it in the most enjoyable form,

Sanitary Science and Hygiene Are

The minister of education has enarged the staff of the Normal School ere by the appointment of Dr. Cl. T. Campbell as lecturer on sanitary science and hygiene. The idea is to give the students a short, practical course on matters affecting the health of pupils and teachers in the public schools. Dr. Campbell's method will, it is un derstood, consist of conversational addresses on personal hygiene of teach ers, school sanitation, conduct in em ergencies and other practical subjects.

ing out, the other part is rusting out he reight had the bars been The only remedy for the ills that arise But when it came to form of from this condition is in the regular althe champion brand, Adam Beck, of ternation of mental and physical work. London, made good his claim, sitting To illustrate the processes of waste like a statue on his horses, Lady Norwood and Lord Raneleigh. Their take off flight and landing were simply the plex forms, was sketched. The basis perfection of all that constitutes abil-ity in the hunting field. The cheering the substance called protoplasm. The shook the rafters, and the master of smallest atom of this substance is as the London foxhounds covered him- instinct with life as the highly organself with glory, first and second prize ized man; and possesses in itself the being his beyond the question of faculties of movement, digestion and reproduction. The human body begins its existence as a minute globule New York, April 23. — Yesterday's or cell of protoplasm, which is an independent unit of life. This multiplies First race, 5 furlongs—The Hoyden 1, modified in their conversion into the

and the community are benefited by independent existence; but united in the body, they divide their labors, and assume different parts; and the more complete this arrangement, the more perfect becomes the organization of which they form the components. These individual cells, also, are dving hourthe dead must be removed, and With every thought, word, and act of the body, innumerable cells die, and have to be replaced. So proanimal tissue, has to be taken in, submitted to the processes of digestion, sanguinification and respiration, in or-

whole body must follow. Physical exercise is an important factor in the renewal of wasted tissue, because it comotes digestion and assimilation of ood and stimulates the heart and lungs to greater activity, and thus insures a more rapid supply of new cells to replace the dead. And to obtain the full benefit of this exercise it must be aken out of doors, where the vivifying influences of sunlight and pure air can be secured to assist all the bodily funcions engaged in the work of repair. To meet special requirements different forms of exercise are needed. Athletics will develop certain muscles; rowing will strengthen the respiration; and so Violent exercise, however, for a special purpose, as in running, or professional rowing, cycling, or other games, is liable to overstrain, and cause serious injury to the heart and lungs. But to repair waste of brain and nerve tissue, walking will do the most good, and the least harm. Attention was called to the fact that exercise which is pleasurable is always more beneficial than that which is monoton ous and uninteresting. And teachers were advised to adopt some hobby, which would involve outdoor work. like the study of botany or entomology By this means they would obtain the necessary exercise, and develop both adding largely to their store of useful this matter was enforced by referring to the fact that a teacher, no matter how well educated, is incapable of do-ing good work, and of managing little children properly, while suffering from the nervous irritation that accompanies ill-health, or an unevenly balanced system. And a closing exhortation was given, when worn with study, or wearied with the monotonous routine

which would develop pleasurable sen-

sations, without being followed by dis-

agreeable or injurious consequences.

# Pay When Cured.

This is Dr. McLaughlin's offer to Weak Men. Rheumatics, Dyspeptics, Men with Lame Backs, Weak Kidneys, Lest Vitality, Varicocele. Wasting of Vital Strength, Sciatica, Constipation, "Come and Go" Pains and to Women with the Weaknesses Peculiar to their Sex.

Dr. McLaughlin's Electric Belt, with its Special Attachments for Either Sex, Restores Youth, Strength and the Pleasure of Living.

I know how sceptical people are after paying hundreds of dollars to doctors without getting any benefit, and knowing that any man would willingly pay for a cure when he gets it, I now offer to all honest men what no other man has ever offered them—a complete restoration to manly vigor and health before you pay a cent. There is no deception about this offer, either in the making of it or in carrying it out. All I ask is fair security that I will be paid when the work is done; this any honest man will be glad to give. I I take all the chances—you take none. Is that fair? Do you want any better evidence of my confidence in my belt?

Now, if you suffer, do not lay this aside and say you will try it later, because I will not continue this offer much longer. Act upon it to-day-NOW.

If you are close enough to call, do so. Let me show you the difference between ny up-to-date appliance and old-style, burning Electric Belts. Let me prove to you why my belt cures when they fail. If you will call I will give you a free treatment to show you how I cure.

SPECIAL NOTICE—If you have a belt that burns, or a "no-electricity" band which has disappointed you, bring it in and I will allow If you can't call, write for my beautiful descriptive book, showing how my belt is used and giving hundreds of letters from grateful people. Address, enclosing this ad.,

\*Excellent Second Cabinaaccommodation on these steamers. E. De La Hooke. Sole Agent for London.

"Clock" Corner.

# "WHOSE GOD WAS HIS BELLY."

Of him it might be written that "his god was his belly." Too often he permitted himself to be-

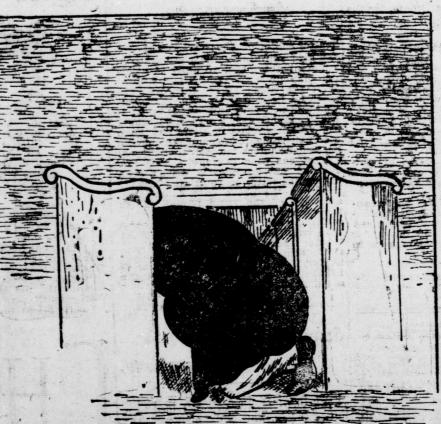

come fascinated

by the "ruby" and good eating, and when an outraged digestion goaded him to remorse, he exhibited in a marked degree his strongly religious nature. One thing which may have influenced him in his sanctimo ni o us outpourings was that he feared he might die. The agony that disordered digestion caused him made him sometimes think that death would be a relief, and yet he

not anxto' die. His appearance partly evidenced

his distress. He was bloated by the fermentation of partly-digested foods. His breath was foul from the pestiferous

gases generated by this same crude matter, which lay like so many cobblestones on his stomach. When at his worst, his eyes protruding,

a glassy yellow in a sea of purple, he heard of Hutch Tablets. he determined to try them, feeling satisfied that he could obtain relief from the cures he heard Hutch had been making. He started taking the little chocolatecoated tablets. He felt relieved almost instantly. and on continuing their use felt quite a different man. He was able to attend the convivial gatherings which oftentimes kept him up in the

"wee sma' hours"; and his religious convictions were if anything strengthened, and a much truer inspiration given his spiritual life.
