

M. Finot, of Paris, a wearer of artificial limbs of long experience, recently bought an artificial leg from us; he is now an enthusiastic advocate of our work.

These cases, coming from remote parts of the earth, together with many thousand testimonials held at this office, attest that Marks' artificial limbs are the best and give the greatest satisfaction. A. A. Marks, 701 Broadway, New York.

**Petroleum Emulsion.**—The Angier emulsion has combined with it the well-known hypophosphites. Each ounce of the emulsion contains  $33\frac{1}{3}$  per cent. of purified petroleum and twelve grains of the combined salts of lime and soda. In consumption, bronchitis, and in all the various diseases of the pulmonary tract, experience shows this preparation to be of great use.

**The One of Many.**—Among the testimonial letters received from physicians by the manufacturers of Imperial Granum is one in which they take even more than usual pride, and from which we quote as follows: "I am sending you a photo of my little two-year-old boy, who has been raised nearly altogether on Imperial Granum. He was very delicate, and we had a great deal of trouble with him owing to his weak digestion, and I feel that your Imperial Granum saved his life. He never tires of it, and it is the only one of the many prepared foods that seems to agree with him."

Samples of this justly celebrated dietetic preparation are sent to physicians on request.

**Aseptolin-Edson.**—In some diseases, such as malaria, septicæmia and la grippe, this effect is so immediate that the disease is often cured as if by magic. In others, such as tuberculosis and phthisis pulmonalis, the effect is often slow and tedious, requiring the most careful attention to adjuvant measures, for the application of sprays, general hygienic care, and scientific nutrient treatment are essential to successful results.

If the remedy is used with care and skill the practitioner will be rewarded by obtaining a larger percentage of recoveries (55 to 60 per cent.) than by any other known treatment. It is not claimed that Aseptolin is a "sure cure" for phthisis or any other disease, but it is claimed that it affords the best known method of treatment for diseases originating from germ infection.

For reports from physicians who have tested this preparation, see advertisement.

**Unguentine.**—In cuts, burns, eczema, bruises, blisters, abrasions, chilblains, bromidrosis, circumcision, indolent ulcer, use Unguentine.
