

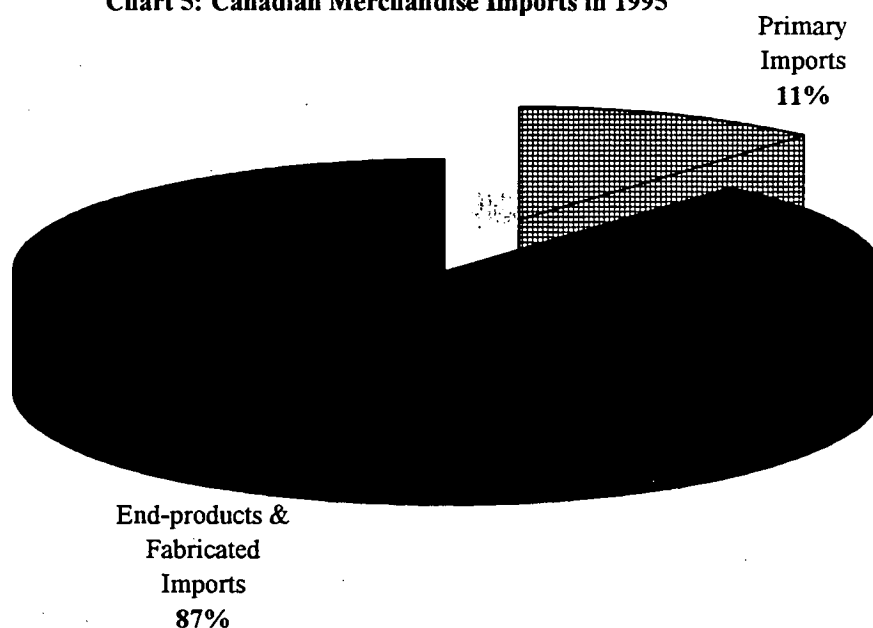

**Chart 5: Canadian Merchandise Imports in 1995**

In Table 3, we have aggregated the Statistics Canada data on Canadian imports into four categories: (1) agriculture and food products,<sup>6</sup> (2) crude materials, (3) fabricated products and (4) end-product imports. The middle four columns in Table 3 present the percentage of each category of total Canadian imports from 1963 to 1995. The last column in Table 3 reports the percentage share of end-product imports made up of auto and auto-parts.

---

<sup>6</sup> Agriculture and food includes exports of live animals, feed, food, beverages and tobacco.
