

## AMALGAMATED ASBESTOS CORPORATION LIMITED

---

- Protected Metal.** Consists of sheet steel, coated with asphaltum and firmly embedded in this is a layer of pure long fibre Asbestos felt.
- Rope.** Commonly used in Fire Departments and manufactured with a wire cloth, being fireproof and waterproof.
- Cement.** For filling between decks and around magazines and all places subject to fire, and used on all the ships of the navies of the world, and also as fireproof linings for safes.
- Tiles.** For floorings, impervious to heat and water, and their elasticity is as high as wood.
- Fireproof Bricks.** Composed of hydraulic lime, sand and asbestos. One side of a nine-inch partition was submitted for one hour to a temperature of 2,050 deg. Fahrenheit; it was in no way affected, and the temperature on the other side of the partition never reached sufficient heat to ignite a match held against it.
- Filters.** Asbestos Filters are in general use. They resist the action of acids and alkalies and can easily be cleaned by hot water, steam, or by fire.
- Insulation for Electric Wires.** Insurance Companies directed that all wire used in the Rapid Transit Tunnel at New York, be covered with asbestos.
- Conveyor Belts.** Owing to their fireproof and wearing qualities, and their recognized superiority under the circumstances to rubber, leather, or canvas, Asbestos Conveyor Belts are used where hot clinker and other substances have to be mechanically disposed of. The durability of these asbestos belts also commends them in all cases where crushed rock, copper or other ores have to be handled in bulk.
- In General.** The experience of the past year and the varied demand for all the grades, taken with the contracts entered into and extending over several years, indicate the versatility of the materials. Asbestos is a natural necessity. Rapidly it is becoming a universal utility.
