

Used Absorbine on Trenton A. 210½

Trainers and owners of valuable horses do not experiment when they have a case of strained tendons or ligaments, soft bunches of any kind, they use Absorbine. Absorbine does not blister or remove the hair and horse can be used during treatment. It is mild in its action, both positive and permanent in results. Anderson Bros., Roachdale, Ind., write under date of July 3rd, 1905: "We have been using Absorbine last year and this season, and used it successfully on 'Trenton A.' 210½ last season. We think it is the best liniment we have ever used." Get a bottle from your druggist or send \$2.00 and get a bottle express prepaid direct from W. F. Young, P.D.F., Monmouth St., Springfield, Mass.

Money in Peeps

Many successful enterprises have sprung from the most humble beginnings for, "Mighty oaks from little acorns grow" is a proverb that fits the poultry business better than any other industry. The raising of chickens can be started in a small way and the flock gradually increased till one has just as many birds as he can handle.

To quickly and successfully accomplish this the hen nowadays is used only for egg production—an incubator hatches the "peeps." One of the most modern and at the same time most successful chicken hatcheries is the incubator known as the Wooden Hen. It is made by George H. Stahl, of Quincy, Illinois, the well known maker of incubators and brooders. The catalogue which this firm issues is one of the most instructive books on poultry raising which has been issued in recent years. It is quite elaborate, containing many plates in natural colors, illustrating the stages of the development of the chick from the egg to the bird. They mail this book free to all inquirers.

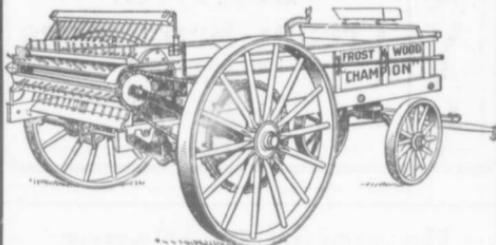

Economy in Using the Manure Spreader

Two farmers well known to me have recently each bought a manure spreader. They are good farmers and know how to economize in the handling of machinery and in the use of time. They exchange work—putting both spreaders at work on one farm at the same time, and supplying help enough to keep the spreaders going steadily from yard or stables to the field. This is a good practice. The spreader should be kept constantly on the move. All the time that it is standing idle is lost time. The spreader should be so strongly made that it rarely, if ever, breaks down, for if it breaks when in use there are a number of men who must either be idle or else have their work changed to the disadvantage of the employer. The latest types of manure spreader are strongly made and rarely ever cause annoyance by undue breakage. No machine is being sold to-day in such great numbers as are the manure spreaders. Various factories are building them, and each vying with the other to make a more perfect machine for this purpose. The manure spreader will help to prevent the western farmer from being so handled as to lose the original fertility until the lands become a source of loss rather than profit to the one who owns or cultivates them. Many eastern farms are to-day nearly ruined because no attention was paid to the matter of fertility preserved and fertility increased. The western farmers, who know the value of clover and are using manure with economy by means of the modern manure spreader, are increasing in number.—O. A. Grigg.

"CHAMPION"

MANURE

SPREADER

Like all other Frost & Wood Farm Implements, the Champion Manure Spreader is the best that can be manufactured. It is built on scientific principles and ones which 27 years of experience have proven to be the **BEST**.

If your land and crops "look slick," then you need a Spreader in the worst way. You can increase your crop from 15 to 20 per cent. by properly distributing whatever fertilizer you put on it, and the only proper way is by using the "**CHAMPION**."

Send for our illustrated pamphlet "B."

The Frost & Wood Company
LIMITED

Head Office and Works - Smith's Falls, Ont.

Toronto Montreal Quebec St. John Truro Charlottetown

TOLTON'S No. 1 DOUBLE ROOT CUTTER

POINTS OF MERIT

- 1—To chop from pulping to slicing is but the work of a moment.
- 2—There are two separate wheels, one for pulping and the other for slicing.
- 3—The united force of both wheels is always used in doing the work in either capacity.
- 4—The hopper is between the wheels and does not choke.

The only Double Root Cutter Manufactured

Fitted with Roller Bearings, Steel Shafting, and all that is latest and best in principle, material and construction.

OTHER SPECIALTIES

Pea Harvesters, Clover Bunchers, Mowing Tools, and all-steel Seed Harrows.

Send for descriptive circular.
