## THE HARDINGE MILL IS A SUN TO THE METALLURGIST

Hardinge Mills in Ontario alone, are grinding over 8500 tons of ore per day and are established in 35 different plants. REPEAT after REPEAT orders have been received from these companies, many of which have previously tried out and discarded stamps, Chile, and Cylindrical mills.

The success of the Conical Mill in Canada, as in other countries, is due to its Conical construction. This construction makes a stronger mill and so classifies the grinding bodies that coarse material is worked upon by large balls at the large diameter, and, as it is reduced in size, is forced up the cone and is further ground by smaller balls at the smaller diameter. The net result is a great saving in power and wear of lining and balls.

**THE HARDINGE MILL MAKES THE STAMP OBSOLETE**

**Hardinge Conical Mill Company, 120 Broadway, New York, N. Y.**

London Office:
