Suppose This Were YOUR Home!

Carefully consider fire protection when you build or remodel your home.

Every waking and sleeping moment you and your family spend in an inflammable house you risk your lives.

Build for safety by using **Gypsum Board and Gypsum Plaster**.

Then all your partitions and ceilings will be made of material that can't burn—Gypsum.

Tight joints, no cracks or crevices, air-space insulation between walls (all features of this type of construction), positively prevent the spread of heat and flames.

Added advantages of **Gypsum Board and Plaster** are their sanitary and sound-proof qualities.

Ask for the Gypsum Board booklet—it's free.

Standard Built Homes Exhibited at Hamilton

One of the features of the Better Homes Exhibit at Hamilton June, 5 to 10th, is the display of the Halliday Company showing their method of building houses.

The Halliday Company have been in the home building business for eight years and have developed a system of building standard homes. They furnish the plans, specifications and the material, with the exception of the masonry. The home builder is, therefore, sure that the materials are of the quality and kind specified. The Halliday Company work direct with the manufacturer and in this way the home owner gets the benefit of factory prices.

The Halliday exhibit illustrates the various styles of attractive homes that can be built under their plan. The company employ their own architects, and the home owner is therefore able to arrange for a design that suits his location, and incorporate in his home any of his own individual ideas or preferences. This is a decided advantage over "Ready Cut" homes where a set design must be followed. The Better Homes Exhibit is held at the Armouries in Hamilton on James Street North, and the Halliday exhibit is directly beside the main entrance.
