**WIRELESS**

In summer evenin's, calm an' still, we used to hear the whippoorwill send forth his plaintive note; we heard the twitter of the frog—the baying of the old coon-dawg—the grunting of the shoat. . . . The glory of the summer night, when cricket's chirp an' skeeter's bife, lent spirit to the hour,—delightful in its warp-an' woof, the rain-drops on the clap-board roof, grew dreamers full of power. . . . But now, alas! The modern way commences when we hit the hay, an' worms the midnight belf. . . . We hear the squawks from Timbuctoo—the dismal groans from Waterloo,—the frenzied shrieks from hell! We gather in all noise that's made,—the devilish rot of every grade—broadcasted through the air. . . . We tune our dingus up at night, and ketch the hymns of hate an' spite, that's let off—everywhere! I used to use a poultice hot, for all the innard pains I got—to draw 'em to the skin,—but I ain't got no keen desire for rigs that draw without no wire, an' fetch hysterics in!

**NEW RULE FOR GOAL-KEEPERS**

The new rule for goal keepers adopted by the C. H. A. and which will probably be used in the Valley Hockey League this season reads as follows:

The goalkeeper may stop the puck in any position or position he wishes, in his own territory, but shall not throw or hold it, and no other player of the defending side other than the goal keeper shall, during the play, be, sit, kneel or slide along the ice in the goalkeeper's territory. The goalkeeper may wear pads and face protector, but must not wear a garment such as would give him undue assistance in keeping goal. The referee must rule off the ice for at least one minute a goalkeeper who infringes this rule and must rule off the ice, for at least two minutes, any other player on his side who has offended against this rule.

When a goalkeeper is ruled off the player who takes his place shall have all the privileges as a goalkeeper.

The goalkeeper's territory was defined as follows: A dark, distinguishing line shall be drawn on the ice between the centre of each goal post, and extending one foot on each side. From the centre of this line and fronting the goal a half-circle shall be drawn in the ice with a radius of four feet. This shall be the goalkeeper's territory.

**SOMETHING ABOUT FUTURE SUPPLIES**

A school boy whose awakened conscience and interest in the world as it is, mixed his arithmetic and geographic knowledge into a long list of interrogations that perplexed him.

"What are we going to do for shingles and boards when the trees are all cut down?"

"What are we going to do when the coal has all burned up?"

"Where are they going to go when the land is all owned and used?"

It is a wise boy that puts such questions to himself. He is thinking in terms of conservation. That young chap is going to be a useful citizen. He is not going to be a waster. He is to help solve our conservation problems.

Thank goodness, the world is full of just such boys who do not wish to live a Nero life, to spend what there is now and let those who follow suffer the Deluge. Such boys are going to save the needs of life from devastation, and long before a need is exhausted they will find its substitute.

We thatched our roofs with straw before the shingles came. Because we have the shingles we now burn the straw. When the trees are all gone we will make a better shingle from the straw.

Geologists tell us that there is coal enough to last through several centuries of time. Already we are toying with great condensers that gather many sunbeams into one strong ray of heat.

We have found it possible not only to get heat from the sun, but to store it. Its only impracticability is the cost of operation. The same genius that found the process will cheapen it. We have found the radio wave carries the sound. Physicians tell us that the same wave will carry heat.

Long before the coal is gone we will cease to mine it. A cheaper and better process of heating our furnaces will come direct to us from the sun whose flames rise above its molten mass surface to the height of the circumference of this earth. That old ball has been burning a long time, and mathematics haven't ciphers enough to calculate the endurance of its flames.

And what will we do when the land is all owned and used? It will take several centuries before even our good country will be crowded.

As our deserts have been brought to bloom, so will the mammoth isle of Australia flower, Africa will be gardened. The lowlands of Himalayas will be farmed. And as we close in, we will learn how to grow more in less space.

This is a good old world we are in. It meets our needs as our needs appear. It meets them because we always have boys who grow to manhood with the inquiring mind that wonders how they can help the good old world to make all things better for man.

**SOUR SOILS**

Soils are like people, they sometimes become sour; neither are very effective in doing what is expected of them.

A sour soil will give weeds of many kinds, one ton of hay to the acre; a dose of limestone, nature's only remedy for sourness in soil, will soon banish the weeds and bring in the plants which make the farm profits.

Humus is much needed in our soils; how lime helps the humus supply and other lime problems will be explained at the Truro Short Course, Jan. 3-12 next. Reduced rates on all railroads whether you attend the whole course or for one day.

Sip all liquids slowly. Do not gulp them down. Do not take a drink of water while your mouth is full of food.
