Panopepton a Food in Every Sense of the Word

PANOPEPTON does not require to be "mixed with milk", soup, or any other food. It is a complete food in every sense of the word.

A tablespoonful of water or whiskey even may pass as a "food" when administered with milk. PANOPEPTON is of the utmost value where other foods cannot be tolerated; when the patient arrives at the point where small quantities of milk and other ordinary foods can be assimilated, then these foods may better be alternated with Panopepton until Panopepton is no longer required.
