

THE BABY'S DIGESTION

Is the source of most of its troubles. A little baby is mainly a small machine for the transformation of food into flesh. If the food is of the right sort there is usually no trouble. A doctor's chief concern is in getting a palatable food that will digest easily. It's easy to get it if you start right. Start with

RIDGE'S FOOD

It is a complete diet in itself. It does not depend on milk to make it nutritious. It has to be prepared, but the results are always good. It has no effect on the bowels—neither laxative nor astringent. It is merely a food, but it is the best food. It digests easily, is readily assimilable and makes sound, healthy flesh. If you are not familiar with it we will be glad to send you a sample can with some literature.
