President

Products/Services
Dental implants

Current Export Markets
U.S.A., Europe, Asia, Latin America, Caribbean

Company Summary
Anchor Implants Inc. was established in 1987 to research, design, manufacture, market and distribute dental implant systems to replace current denture technology. After two years of successful clinical trials, the company's patented implant system, the Anchor 1, was introduced in 1988 to the North American market. Fabricated from titanium rods, the Anchor 1 simplifies the surgical and the prosthetic stages. The company also produces a full range of implant supplies and provides educational training courses to practitioners. Anchor Implants is currently developing a third generation implant system, which further simplifies the prosthetic stage and reduces implant costs.
