## Early Closing..

During the summer months, July and August, this store sets the pace by closing daily at 5 o'clock, and Saturdays at 1 o'clock. This is a practical store reform in the interest of two thousand employees, and out of respect for public opinion, which favors shorter hours. For three years we have tried it, and this year we repeat it with emphasis. And for the benefit of our employees we will close the store both days, Friday and Saturday, July 1st and 2nd.

THIS YEAR'S WHEAT CROP.

It is estimated that at least 1,500,000

acres of wheat are growing in Manitoba

and the Northwest Territories this

year, the acreage devoted to wheat in

Ontario will be larger than usual, the

New Brunswick Government is offering

bonuses to farmers for growing wheat

and in Nova Scotia farmers who have

not had wheat on their lands for many

years have planted it this year.

Canadian farmers are not alone in the

determination to put as much wheat as

possible on the market this year. Ameri-

can farmers are making equally great

efforts to increase their crops of this

cereal. It is estimated that the wheat

increase in the United States will be

more than 100,000,000 bushels this

year, and as the crops promise to be

particularly good, it is thought that

the total will be over 100,000,000 bushels

more than 1897. Argentina, Russia and

other wheat growing countries have no

doubt been stimulated also by the pre-

vailing high prices to increase their

acreage of wheat. Altogether the out-

look is not very promising for high

prices.

The Canadian farmer is in the un-

fortunate position of having to take

into consideration all the conditions of

supply and demand throughout the world

before he can form any idea as to what

his profits for the year are likely to be.

If there were an imperial preferential

treaty it would be a much easier matter

for the farmer to decide how to regu-

late his crops. The average price of

wheat might not be much higher than

under the present system, as the wheat

increase under the empire would be im-

mense, but there would certainly be

a much easier way of doing it than

it is now. The farmer is in a position

where he must decide how to regu-

late his crops. The average price of
