

The "KODAK" Store

Sells You Quality and Gives You Speed FREE

Do you get the very best results from your Snapshots all the time? You do if you let the KODAK STORE develop and print them for you, because so exceptionally up-to-the-minute are their printing and developing methods and equipment, so efficient are their assistants (you see they handle far more films than any one else in the city, and they're developing and printing only, all the time) that while they can, and do, give you a 24-hour service, no detail of quality is lacking. Every print from every negative is accurately and perfectly finished. When the KODAK STORE develops your prints it does not sacrifice quality for speed, it combines the two, and gives you—perfection.

Labradorite

Always we have prided ourselves on the quality of our Labradorite and refused to place on sale stones that did not do credit to the peculiar beauty that is its chief charm. We have now received the first samples of our new stock and they fulfil in every way our ideas of what Labradorite should really be like when made into jewellery.

Specially selected and extra well polished stones made into an assortment of Pendants—Bean, Oval and Square shape are the chief items in our new selection.

FURNISHED BY JOHNSTON AND
WARD, BOARD OF TRADE
BUILDING, WATER ST.(From Financial Times, Aug. 29, 1924)
BELGO'S EARNINGS ARE ABOUT
22% ON COMMON.

MONTREAL.—Despite the fact that the mill is running at only about 85 per cent. of capacity, Belgo-Canadian Paper Company is earning at the rate of about 22 per cent. on its common shares. This information comes from a reliable source.

The company completed twelve months under the new regime at the end of June, and is understood to have earned about 18 per cent. on the common in that period. This was after provision for bond interest, depreciation, and sinking fund.

Belgo will not issue any statement until the close of the present calendar year, when it is planned to bring out an eighteen months' earnings statement.

PORT ALFRED MILL SOON TO MAKE NEWS.

May Break Ground in Spring for New Mill—Directorate is Now Lined Up.

MONTREAL.—Port Alfred Pulp and Paper Corporation has its new directorate lined up, and it provides an interesting group of business men. The new president is R. O. Sweezy, a leading pulp and paper engineer, who will devote most of his time to making a success of the Port Alfred Co. The vice-president is J. H. Gundy, of the investment banking firm of Wood, Gundy and Co. It is understood that Messrs. Sweezy and Gundy hold a controlling interest in the company. Other directors include Arthur Cross, managing director; J. W. Ross, C. E. Taschereau, E. A. Macnutt and Eugene Bergeron. Messrs. Cross and Ross are connected with the accountancy firm of P. S. Ross and Sons; Mr. Taschereau is a brother of Premier L. A. Taschereau of Quebec; Mr. Macnutt is treasurer of the Sun Life, and will look after that company's large interest in the new organization; Mr. Bergeron is manager of the Port Alfred mill.

The company is now operating on a satisfactory basis as regards earnings, and is selling its production in the United States and Canada, having found new customers to replace the English clients to whom sulphite pulp was supplied by the former company, the Bay Sulphite Company. Ground will likely be broken in the spring for the first unit of the new mill. It is planned at first to manufacture 100 tons of newsprint a day, and as market conditions warrant, the mill will gradually be increased until a daily production of 400 tons of paper is reached.

The outlook for the mill from a paper-producing standpoint is especially favorable because of the fact that cheap power can be had from the Duke-Price development.

Poignant Russian
Tragedy Recalled
by Exile's Death

HARBIN, China, Aug. 1 (A.P.)—An old man died recently in a small village of eastern Siberia whose name evokes among Russians memories of a tragedy, the poignancy of which is unsurpassed in the annals of that wild and gloomy land. St. Petersburg was the scene and the time the late eighties. The principal actor was a young officer of one of the most brilliant regiments of the Czar's guard. He was accomplished and highly connected and a general favorite, but the life led by him and a majority of his comrades proved too fast for the resources of a diminished and badly managed estate. The young officer turned to the money lenders who preyed upon men of his kind. One was found who was willing to advance money against his promissory notes, and who never failed to respond until the total debt had reached many thousands of rubles.

Finally the chance of a wealthy marriage gave promise of release for the young man from his financial troubles. He informed the money lender of his good luck and obtained more money.

The money lender told the young officer that he planned a fine wedding present for the occasion of his marriage. Misinterpreting the man's meaning and taking it to be a threat that the notes would be presented for payment or protest, the young officer foresaw himself ruined and resolved upon desperate measures. The money lender was found dead in his own house a few days later, and the crime was traced to the borrower. The police discovered among the old man's effects a package neatly tied with ribbon containing all of the other's notes. An inscription showed that this was to have been the wedding gift. Evidence of the young officer's guilt was clear and he was exiled to Siberia. Old residents of Siberia tell many stories of his remorse-stricken life, which has just ended in poverty and misery.

Water-Absorbing Metal

A form of bronze that is so spongy as to soak up water is described in Popular Mechanics (Chicago, July). We read in this magazine: "Imagine a substance so hard that it will turn a lathe tool, and yet so porous that it will soak up oil like a sponge, and you have a fair idea of a brand-new metal that has been perfected in the laboratories of the General Motors corporation and will soon be found in many installations that have heretofore lent themselves only with difficulty to efficient lubrication. In composition it is a copper-tin bronze in which graphite has been incorporated. Thousands of tiny pores, uniformly distributed throughout the structure of the metal, give it the absorptive qualities of a blotter. The quantity of oil the metal will absorb amounts to 25 per cent. of its own mass, and a peculiar feature is that the oil does not drain out again but is held no matter how dry the surface may be wiped. The metal is designed for bearings in the generators and starting motors of automobiles, in laundry machinery, where the leakage of alkaline water makes lubrication a difficult problem, as well as in installations where thorough lubrication is required on account of heavy loads and high speeds, or both."

Hollanders for Canada

WINNIPEG, Man., Aug. 29.—Many farmers' sons and farm laborers of Holland with thorough agricultural training will come to Canada as settlers, if the party of Dutch editors at present touring the Dominion give a favorable report to their government on conditions in Canada.

This was the opinion advanced by M. J. Brusse, one of the party during his stop in Winnipeg. Emigration from Holland, he said, was on the increase and would continue to grow. However, Canada could not expect to receive annually great numbers of immigrants from Holland because that country was not overpopulated with agriculturalists, although the industrial field was overcrowded. There was no intention of burdening Canada with artisans, Mr. Brusse declared. Settlers sent over would be desirable farmers, who understood agriculture in all its phases. Many sons of farmers in Holland found it impossible to obtain land in their native country with the inevitable result that they sought other continents in which to settle. In the past a large number of these young men had migrated to the United States, but if Canadian conditions were favorable, they would not receive much persuasion to try farming here.
