## NOTES ON SOME LAND AND FRESH-WATER MOLLUSCA FROM FORT CHIMO, UNGAVA BAY, UNGAVA.

By J. F. WHITEAVES.

In 1864 Dr. A. S. Packard made a small collection of land and fresh-water mollusca on the Gulf and Atlantic coasts of Labrador. The names of the species in this collection are included in his "View of the Recent Invertebrate Fauna of Labrador," published in the first volume of Memoirs of the Boston Society of Natural History. Omitting *Alasmodonta arcuata*, which is included only on hearsay evidence, and *Hyalina electrina* and *Zoogenetes harpa*, which seem to have been found only on the Gulf coast, the species recognized from the Atlantic coast are as follows, the land shells having been determined by Prof. E. S. Morse.

### PISIDIUM STEENBUCHII (Moller).

= *Cyclas Steenbuchii*, Moller, 1842.

"Abundant in fresh water streams and swampy lands at Square Island and Strawberry Harbor."

### ISTHIA (PUPA) HOPPII, Beck.

"Common at Strawberry Harbor."

### CONULUS (HELIX) FABRICII, Beck et Moller.

"At Strawberry Harbor, July 26. Found under sticks in a retired and protected valley."
