30	Fri.	55	59	5 0	55	14	51	11 23			with light breezes.		

APRIL.—That it is possible to cut timothy too close seems quite clear, especially in a dry, hot climate. This is particularly the case when the cutting is done with a mower, which is now very general. The bulb having been shaded in its growth by the tall grass is suddenly laid bare to the rays of the hot sun in July and August, which dries every particle of moisture in it, consequently, when rain comes the bulb has lost its germinating power. It was noticed that, when a small portion of a meadow was cut down with a cradle for seed, that the growth of grass during the fall was far greater, and also that the timothy is a great deal heavier on that part than alongside where it was mown close with the machine. This being the case, the value of machinery is, by so much depreciated, and the cradle is to be preferred.

Jacobs' Liquid has been before the Public for 20 years.

One of Colby's Pills will often prove sufficient.
