## CASE I. CHART No. 2.

exceeded one ounce in the twenty-four hours. Temperature and pulse may be noted on the chart. This patient, who had during the previous six months been steadily losing in weight, in spite of the fact that she was living in the best surroundings, has in addition to the improvement in her symptoms since scrum treatment, added nearly three pounds to her weight. Chart and Fig. No. 2 illustrating this case, give her condition at the time of writing (July 20th).

## CASE No. II.

A single woman twenty-one years of age. Family history negative. This patient's illness dates back five years, when it started as a
