

COBALT--Temiskaming, Chambers-Ferland, Crown Reserve Strong--COBALT GET IN HEAVY ON THIS MARKET REACTION

DO YOU KNOW that TEMISKAMING will, early in December, double their dividend and to-day's prices that means 17 per cent. on your investment. Buy now and get this coming dividend. DO YOU KNOW that their output will be increased three times over by the new plant and that before six months, dividends will get another big hoist, as the ore is there blocked out now to pay them. Get into the good stocks and be sure to get in on this one. DO YOU KNOW, that CROWN RESERVE directors can hardly believe themselves how it is possible to pay the enormous dividends and divisions of profits which the ore returns make possible obtained through development only. DO YOU KNOW that this mine will astound the World when they start stoping out ore. DO YOU KNOW FURTHER that this Cobalt camp could continue to produce silver at big profits when other silver countries would be forced to close down if Silver were to drop to 40. At to-day's market prices you should buy, first, Temiskaming; second, Crown Reserve; third, City of Cobalt, Kerr Lake, La Rose, Scotia, Trethewey, Buffalo and Co.

WHAT CAUSED THIS REACTION?

The buying of new flotations caused selling of Standard stocks and interest sagged from the old stand-bys. I would advise you to put your money into the solid standard dividend-payers, and be on the safe side.

CYRIL T. YOUNG

INCREASE OF DIVIDENDS MARKS COBALT PROGRESS

New Mines Forging to the Front—Over Six Millions to Shareholders Since 1904.

The dividend disbursements of the older Cobalt mines are being constantly increased, and several new dividend-payers will enter the list this winter. Buffalo has increased its dividends to 5 per cent. quarterly, and it is said that the directors are considering the disbursement of 1 per cent. a month in the shape of extra dividends. There are persistent reports that Nipissing will go on a 20 per cent. basis at the next dividend meeting. Almost without exception the Cobalt mines that have been in operation for a period of three years are paying handsome returns to their stockholders. The new mines are making rapid progress towards the dividend stage. Among these is Cobalt Central, which has paid \$200,000 worth of silver since June 1, and has a high surplus on hand, beyond the amount necessary for the extensive development work to make its first dividend. It is considered expedient to do so. The Cobalt Central mines have been opened less than eighteen months, and the company has been a regular shipper for only about eight months. It has thus far developed only about four acres out of its 517 acres of mineralized lands. Meantime plans for extensive development of other properties are being actively prosecuted. On lot 28, adjoining the Big Pete mine, two promising veins have already been

out in the 30-foot level, which is being run out under Glen Lake from the bottom of the shaft in the direction of the Crown Reserve vein, which crosses this tract. A good body of ore has also been uncovered in trenching operations on the north end of the Gandy property, adjoining the Conlagas. A winze is being sunk on the two new veins recently discovered by the diamond drill below the 310-foot level in the Big Pete mine, and it is expected that these veins will be opened up for shipment within a few days.

Cobalt as a dividend payer has long since passed the standard set by mining camps in the past. So much goes to demonstrate that mining propositions can be established as legitimate concerns almost on a level with industries. In fact, a mine, properly equipped, and the machinery of drilling, compressing and stamping ore is set in motion and regular shipments made, the proposition is more than a mine—it might be called an industrial.

With this fact in view, and the ever-increasing activity in the camp, the time will surely come when Cobalt will be one of the biggest dividend-paying propositions in existence.

Since 1904 up to the present time, Cobalt mines have declared dividends aggregating over six million dollars, the dividends going to the shareholders in thirteen years. The following is a list of the dividend payers and the amounts that have been paid:

Nipissing	\$2,200,000
Kerr Lake	750,000
T. & H. B.	927,200
Buffalo	267,000
Right of Way	105,000
Silver Queen	270,000
Conlagas	680,000
McKinley - Darragh	324,346
Poster	45,000
Temiskaming	215,000
City of Cobalt	50,000
Crown Reserve	142,000
Total	\$6,196,520

COBALT IN THE ASCENDANT.

Richest Mineral District in the World. Causes Boundless Enthusiasm.

The Houghton Mining News says in a recent issue:

"Five years is a short time to step from the discovery point to a commanding place in the front rank of the world's great mining camps. In percentage of profit to output it stands alone. From total expenditures of five to ten cents it produces a dollar's worth of product. This is not individual mine returns, but is the camp average from its early producing properties. For three years an average tonnage value of \$75 was maintained from total ore shipments during that period. The record of profits and dividends exceeds ten million dollars, and the camp is still in the swaddling clothes of development. When one stops to consider that only five years ago the Cobalt district was an unbroken wilderness, the achievement becomes indeed remarkable. In quartz mining history records no greater accomplishment than that established by Cobalt in its transition from primitive surroundings to that of its present proud position of being the greatest among all silver districts heretofore discovered in the annals of mining. Now comes fast upon the heels of Cobalt's progress the great Montreal River district, not yet two years removed from its first silver discovery, but already with a record in respect to surface indication even now not equaled by the older camp. Above three hundred silver discoveries have been made since December, 1906, in exploration work alone, in the Elk, Silver, Bloom, Miller and Gandy Lakes section of the district, and each day continues to support the last discovery with another. Twenty-five hundred prospectors are at work on the claims in the newer district within a radius of twenty miles of Elk City, the outlying point of the river country. In scores of instances the results are astounding and claims with silver showings are changing hands at fabulous amounts. Not one acre in a thousand has been systematically explored, and when one begins to figure on the result that future development is likely to bring about, imagination runs riot, and the mind is clouded with visions of untold riches."

NEW YORKERS ENTHUSE. Are Willing to Inspect Mining Properties and Investigate Interests. T. H. Crowley of Peterboro, well-known as a prospector and mine promoter, has returned from New York, where he has induced capitalists to inspect his properties in Cobalt, Rainy River district, and Hastings County. Mr. Crowley says that Americans are growing more and more enthusiastic over the opportunities in New Ontario, and are literally greedy for information that is reliable. "The time is now ripe to interest American capital in sound mining propositions. The American people are anxious to inspect properties and investigate reports at their expense. Never before have I met with such singular success in New York," said Mr. Crowley. "This trip was the third one I have made in the interest of some special properties, and I feel highly satisfied with results."

Mr. Crowley was also in Boston, where the Cobalt enthusiasm is catching on with renewed force and vigor. Boston people are showing keen interest and lending sympathetic ears to the man who can produce the goods and "show them."

COAL OIL WORSE THAN DYNAMITE.

WINNIPEG, Nov. 27.—That oil, poured on a living fire, would be more dangerous than dynamite or nitroglycerine used similarly is the statement of Professor Parker, who is completing tests of samples of oil obtained from the same source as that which resulted in fifteen deaths within a hour's time in the province.

"This oil," said Professor Parker, "is extraordinary in some respects, believe that it contained a heavy percentage of naphtha, of low grade perhaps."

Cobalt Talks

Cobalt in the last three years has paid over \$7,000,000 in dividends.

Cobalt values are increasing every day.

Cobalt investments are logical, conservative, safe, and sure to yield large returns.

Cobalt Monarch Stock at 15c

per share (par value \$1.00) is bound to earn big money, and offers the best chance for advance in Cobalt.

Room K (office floor), King Edward Hotel, Toronto, Ont. ESTABLISHED IN NEW YORK 1884.

52 BROADWAY - NEW YORK.

Some of Our Reasons for Recommending the Purchase of the Following Stocks Are:

- REASONS:
- (1) Temiskaming & Hudson Bay Mine has paid \$141.00 on par values of one dollar.
 - (2) Temiskaming will declare another dividend on December 5th at the rate of 24 per cent.
 - (3) Crown Reserve, we understand, will pay next dividend 10 per cent.
 - (4) Buffalo is paying 32 per cent. per annum.
 - (5) Trethewey likely to pay 20 per cent.

In view of the fact that the above dividends are about due, we are looking for much higher prices between now and first of the year. We will be glad to furnish you with any other information you may require upon application.
