ANATOMY OF MAN'S BODY ACCORDING TO ANCIENT ASTRONOMY.

Aries ♈ governs the head and face.

Disces ✕ Feet.

It is now fully proved, that these planets, with the earth which we inhabit, and also the moon, revolve round the sun, which is fixed in the centre of the system. There are two kinds of planets, primary and secondary. The first, or moons, are smaller planets, revolving round the primary; while they, with the primary planets, called also satellites, move round the sun. The planets move round the sun at various distances, some being much nearer to him than our earth, and others being much farther off.
