As the .—The season of toil and active exertion again comes round. The rigours of winter are passing away, but allow us to say that the cattle may yet require great care. Now is the time when a good supply of root crops may prove of the greatest advantage. Horses that are soon required for heavy work must be kept in good order. A few carrots, turnips, or mangels will be found very beneficial. Other stock will be equally profited. Roots not only impart a large amount of nutritious ingredients to the animal, by which ordinary waste is restored and growth promoted, but they operate beneficially in producing a healthy action of the stomach, and purify the blood.
