ing Order Shortly.

The new machine shops recently erected for Ablett & Cunliffe, near the Red Mountain depot, are ready for occupancy, and the only thing now needed is the machinery. It was understood that this would have been here long ere this but it has been delayed, and was only started from the east in the early part of this week. The railway company has guaranteed to deliver the machinery in 14 days from Montreal, and it may fairly be presumed that this valuable industrial enterprise may be in good working order by the middle of the month.

The machine shops of the British America corporation are in the same fix, and the company is patiently awaiting the arrival of the machinery. When this arrival of the machinery. When this arrival of the manufactured in Rossland, and this will afford employment to a con-

and this will afford employment to a considerable number of skilled workmen, who will draw large pay. It will, too, be a very great convenience to the corporation, as there will then be no necessity to wait for there will then be no necessity to wait for weeks for a small piece of machinery that they can make themselves in a few hours. Both the Ablett & Cunliffe, and the British America corporation shops will be fitted up with every modern device that is needed here, and will be equal to the task of making or repairing anything required in mine work at short notice.

menced in All Directions-The Good Hope Property Leased.

Ymir, B. C., April 1.—[Special.]—The Delinquences and Lack of Facilities no use for chartalans of any kind and the first three months of the pres- Columbia (Rossland & Slocan) syndicate,

occupied with the new eight-hours law, to the exclusion of everything else, and the action of the legislature is almost universally condemned. With the exception of the Hall mines company, all the companies here pay their miners \$3.50 per day, and consequently the new regulation is a very serious thing to them.

Reliable information from the Slocan states that the men will insist on being paid \$3.50 for the 8-hour day, in which

states that the men will insist on being paid \$3.50 for the 8-hour day, in which case the mine operators are determined to close down. In the meantime Bruce White of the Slocan Star, Mr. Woods of the Last Chance, and Mr. Perry of the Noble Five, are in Victoria seeing what they can do.

The situation here is far from being re-

they can do.

The situation here is far from being reassuring. The Hall mines company have been notified by the inspector or mines to comply with the law, but what course the management intend to acopt will not be known until J. J. Campbell returns from Rossland. Captain Duncan of the Duncan mines company has notified his men that if the law is enforced they will be paid at the rate of 35 cents an hour, instead of \$3.50 a day, and if they do not agree the property will likely shut down, though this is not settled yet. The intentions of the London & British Columbia Goldfields have not been made public yet.

TOURET'S ASSASSINATION. Ozouf Evidently Intended to Kill President Loubst.

Paris, April 1.—Ozouf, the man who as-assinated M. Touret, in the Bois de Boulogne, yesterday evening, mistaking him for President Loubet, whom he resembles for President Loubet, whom he resembles strikingly, is an electrical engineer who lost his fortune in the Panama smash. It is suggested that the mention of the Panama scandals in connection with M. Loubet's election is responsible for the man's idea of assassinating the president. The assassin fired two bullets at M. Touret, who expired immediately afterwards. Ozouf was promptly arrested.

The Contract Completed. Winter, Parsons & Boomer have completed their contract for grading in the city for the Canadian Pacific railway, and for building bridges and trestles be-tween Rossland and Trail. The trestle acros the Centre Star gulch is all ready to have the rails laid on, and in a few weeks the cars will be running to the War Eagle and Centre Star mines.

It has been demonstarted by the inves tigation which has so far been made that the embalmed beef furnished the soldiers in the late war was as deadly in its effects or missed points. The result of the match has made the boys all the more eager to test their skill with the Rossland club, to which a challenge was recently sent.

No Sieker Than Aguinaldo.

London, April 1.—A dispatch to the Morning Leader from Paris says that Agoncillo, the Filipino representative, is seriously ill with pneumonia.

in the late war was as deadly in its effects as cold lead. In fact, more so, as bullets would often miss, but the beef hit the same spot every time. In view of the discovery the Sun would humbly suggest that the American soldiers be withdrawn from the Philippine islands and that their place be supplied with a few ship loads of canned beef, to be distributed among the natives.—Oakesdale Sun.

Canadian Pacific Railway company in connection with railroad and smelter enterprises in this part of British Columbia, is the best evidence of the confidence of large capitalists in the permanence of our mineral wealth. When in Montreal I had a long talk with Sir Wm. Van Horne, and these investments have only been made and the policy of vigorous C. P. R. extension decided upon after the most careful inquiry. The knowledge of this fact will do much to stimulate investment here by other large capitalists."

by other large capitalists."

Mr. McMillan expects to be in Rossland all the summer looking after his various interests here.

Air. Bostock, the member for Yale and Cariboo, believes that the government should amplify the project looking to the establishment of telegraphic communica-tion between the Yukon district and the outside world by constructing a line from Dawson to Quesnelle, to connect with the government telegraph between that point and Ashcroft on the Canadian Pacific reallway. It is now proposed to string a railway. It is now proposed to string a wire from Bennett to Dawson. Connection will be established at Bennett and the line of the White Pass railway, terminating at skagway, and communication will be had between these points and Van-couver and Victoria by steamer. Mr. Bos-tock holds that this is a mistake, and he will endeavor to impress the government with the wisdom of his view. The distance between Quesnelle and Dawson is about 1,200 miles, and the cost of stringing a wire between these two points would in round numbers be \$600,000, adopting Mr. Hosmer's estimate of \$500 a mile. Though the amount is large, it is he opinion of Mr. Bostock that the expenditure would be justified. The local advantages would be great, because the settlements along the way, such as Hazelton and Telegraph Creek would be horsely into communication. Creek, would be brought into communication with the outside world and their development advanced. The delay involved in the steamship voyage from Skagway to Vancouver or Victoria would be avoided, an all-Canadian line of communication be established, and DawsonCity would be brought into immediate communication established, and DawsonCity would be brought into immediate communication with Ottawa, which would greatly facilitae the good government of the district. It is likely that an enormous investment of British capital will be made in the Yukon, and the interests of the country, as well as of investors, would be materially advanced by establishing a direct connection between Dawson and London.—Toronto Globe.

PIMPLES ON THE FACE. - Can be cured in three days by the use of Dr. Agnew's Ointment. However impossible this may seem, a few applications will convince. Many are cared who have been disfigured for years. Try it today. Sold by Goodeve Bros.

Photographing Waves of Sound. Madison, Wis., March 31.—Prof R. W. Wood of Wisconsin university, has succeeded in making photographs of waves of sound in the air. The sound wave is the crack of an electric spark, and it is illuminated and photographed by means of the light of a second spark, which flashes between two wires at some distance behind the first, and at intervals of about one-ten-thousandth of a second tance behind the first, and at intervals of about one-ten-thousandth of a second after the second spark. The second wave is thus caught before it has gotten out of the field of the instrument, although moving with a velocity of 1,000 feet a second. The wave appears as a thin circle of shadow, with a light border, being simply a sectional view of the rapidly-diverging spherical shell of condensed air constituting the sound wave. By placing a glass ing the sound wave. By placing a glass plate near the point where the wave starts
