Opposite THEN HAD YOU BETTER NOT ACT AND TRY THE MACHINE YOURSELF?

The "Plansifter" in a 30-Bbl. Mill.

Holt, February 28, 1897.

Messrs. Wm. & J. G. Greey, Toronto, Ont.
 GENTLEMEN:—As I have now quite a little opportunity for observing the work of the "Plansifter" which you supplied to me, it being now nearly three months since it was started, I have pleasure in saying that it is everything that you represented it to be, and it comes fully up to my expectations. I find that the machine is very light on power, that is, compared to other Roller Mills using steel systems, which I have seen before deciding to adopt the "Plansifter." The machine is easily controlled and regulated in its operation, produces very satisfactory results in regard to the quality of flour made and the cleanness of the separations of the different stocks. The machine does not cause any vibration or oscillation to the building that is appreciable. So far as I have been able to observe, I believe it is the best bolting system, more especially for small mills. I am only using in connection with it one Centrifugal and one Bran Duster.
 In conclusion, I am thoroughly satisfied with the machine and its operations in all respects, and have no cause to regret having adopted it when remodelling my mill. Yours sincerely,
 ROBT. SUGDEN.

The "Plansifter" in a 250-Bbl. Mill.

Three No. 2 Plansifters and 2 No. 6 Little Wonders did all the bolting.

Peterboro, February 20, 1897.

Messrs. Wm. & J. G. Greey, Toronto, Ont.
 GENTLEMEN:—In reply to your enquiry as to how we liked the work of "Plansifters," would say that after running three of them between one and two months continuously, we are very much pleased with their work.
 They run with little power, make perfect separations, and give no trouble whatever in their operations.
 The different separations can be seen very readily, and a miller is not at any loss to tell just what the machines are doing, while the separations are under perfect control.
 We had no difficulty whatever in making 250 bbls. per 24 hours, the flour being A 1, and our yield running below 4 bushels, 15 pounds.
 The sieves can be readily changed and repaired if necessary. They run very steadily, causing no undue vibration in the building, and were we now purchasing now scalping and bolting machinery, the "Plansifter" would be again our choice.
 Yours very truly,
 THE CONSOLIDATED MILLING CO.
 P. M. Clark, Manager.

The three Plansifters in the above mill were placed side by side in the fifth (top) storey of a not overly strong frame building. The top storey was formed with a mansard roof built in the usual light style with 2 x 6 joist. The machines were suspended from light timbers run along under the roof. When standing on the floor beside the Plansifters when in motion, at full capacity, one could not detect any vibration to the building. It was considered a severe test and proved conclusively how steadily the Plansifters run, and how accurately and easily they are kept in perfect balance.

ITS ADVANTAGES
ARE

It Saves Space
 It Saves Power
 It Saves Cloth
 Makes Better Separations
 Makes Purer Stock
 Makes Better Flour

Makes Better Clean-up
 Makes Closer Finish
 Makes Larger Yield
 Makes Milling Easier
 No Vibration
 No Noise

No Dust
 Easily Controlled
 Insures Uniform High Grade
 Increases Capacity
 Must Come into General Use

Big Mills Cannot Afford to do Without them, and they do Charming Work in the Smallest Mills
