Cut showing the inside of Ventilator.

THIS Ventilator has proved itself to be superior to any that has been placed before the public. It has proved by the tests which have been made its adaptability for ventilating large buildings, closets, rooms, vaults of churches, balk cellars, schools, the office, stables, etc.

It is fitted with a screw on the inside, by means of which a constant current of air is established. The chief feature of this ventilator is that its motive power is derived not only from the slightest current of air, but the difference of temperature within and outside the building.

Every ventilator is guaranteed to give entire satisfaction.
