

Scientific Forging and High Grade Bicycles.

One of the big drop hammers in the Massey-Harris Bicycle Works.

One of the chief points of difference between a low grade and a high grade bicycle is in the frame connection—the joints and brackets. Many makers use a malleable casting or a sheet steel stamping costing but a few cents. On the “Massey-Harris” nothing but steel forgings are used, being the most perfect and strongest joint obtainable. For instance, the crank hanger bracket in the rough weighs seventy ounces, and when drilled and machined ready for brazing its weight is but *twelve ounces*—a costly but a sure way of making a good job. The tools and appliances for manipulating these steel parts are the most expensive and most scientific class of machinery. The Massey Harris bicycle plant is now and up-to-date—the finest and best equipped in Canada.

THE SILVER RIBBON WHEELS

are away in the lead for 1897. By sending a post-card with your address and mentioning the CAMPAIGNER, a '97 catalogue will be sent free.
