190 Yonge St. Canada's Greatest Store. Toronto.

YONGE AND QUEEN STREETS, JANUARY 8, 1897.

The weather is going to be colder. We've anticipated that fact right along, and the advanced season hasn't interfered with the range of goods. There's plenty of room for winter yet, with Easter fifteen weeks away, and spring likely to be later than usual. That's an argument for larger interest in cold weather goods. This is a good time to buy, with prices generally reduced and values generally very special.

January is a month of bargains, and nowhere is the bargain impulse stronger than here. In addition to the white goods sale we crowd the interest with such money-saving chances as these:—

450 pair of Men's High-class Footwear in all newest styles and shapes, consisting of Gents' Genuine Box Calf Lace Boots, in black or tan, heavy sole, leather lined and French calf-kick, lightweight, for fine wear, pointed toe; also the popular Slipper Boots, in Harvard black or tan calf skin, waterproof, leather lined, with rubber outsole, no rubbers required with this shoe, sizes 6 to 10 1/2, regular price \$5 to \$6. Saturday.....	2.95
50 only Men's Single and Double-breasted Overcoats, made of imported English beaver and nap cloth, navy blue and black, velvet collar, checked lined and Italian cloth lining, broken sizes, from 36 to 44, regular price \$7 and \$10. Saturday.....	5.00
80 only Children's Coats, in fancy Eiderdown, pointed collar, trimmed with angora fur, lined throughout, sizes 24, 26 and 28 inches, regular price \$3.50. Saturday.....	1.89
Ladies' Jackets, in all-wool beaver cloth and covert coating; colors, black, brown, fawn and green; double-breasted, with pearl buttons, lined and unlined, fine tailor-made garments, regular price \$16 to \$23. Saturday.....	9.50
Ladies' and Misses' Jackets, in black, beaver and frieze cloth, double-breasted, with pearl buttons, regular price \$6 and \$7.50. Saturday.....	4.00
75 only Ladies' Extra Heavy All-wool Frieze Capes, colors black, grey, fawn and brown, elegantly made garments, regular price \$6. Saturday.....	3.69
75 only Girls' Goretchen Coats, new styles, tailor-made of fancy German mixed tweeds, light and dark colors, diamond cape and collar, fancy buttons, sizes 27 to 39 inches, ages 4 to 12 years, regular \$4.50 and \$5. Saturday.....	2.75
Ladies' Heavy Ribbed Vests, long sleeves, button and closed fronts, winter weight, regular price 25c. On sale Saturday.....	.12 1/2
Ladies' Heavy Ribbed Merino Vests, wool mixture, button fronts, winter weight, long sleeves, regular price 40c. On sale Saturday.....	.20
R. and G. Corsets, extra long and medium waist, two side steels on each side, 5-hook clasp, made of fine saten and French Coutille, silk laced, all sizes, regular price \$1.75 and \$2. On sale Saturday.....	.85
Men's and Boys' Black Imitation Lamb Cap, Dominion shape, with large, bright curl, good Italian lining. Special value at.....	.50
Men's Heavy Ribbed Scotch Elastic Undershirts, in flesh and blue grey colors, double-breasted, pure wool, men's sizes, regular price 50c each. Saturday.....	.25
Ladies' Seal Muffs, made from the finest Alaska seal, large shape, best satin lining, down filling, finished with drops, regular price \$18. Saturday.....	12.50
Ladies' Hudson Bay Sable Scarfs, made from fine dark skins, finished with two heads and six large tails, regular price \$12.50. Saturday.....	7.50
Misses' Black Cashmere Ribbed Hose, high styled ankles and double sole, heel and toe, regular price 35c to 50c. Saturday.....	.25
Men's Kid Gloves, wool lined, one clasp, in tans and red tans, all sizes, regular price \$1.00. Saturday.....	.49

Whatever the need expect to pay less here than anywhere. That applies to Drugs and Medicines as much as anything. Doing a big business in both just now, and bound to do more as our prices get better known.

## A FIGHT IN GREY.

Trouble Over the Voters' List in No. 1 Division for County Councilors.

Result May be Changed.

Owen Sound, Jan. 7.—(Special).—There is at present every prospect that the fight for the election of County Councilors for No. 1 Division of Grey, composed of Owen Sound and the Township of Sarawak, is not finished. To-day it has been discovered that the deputy returning officer at one of the polling booths in Sarawak improperly amended the list used by him by striking therefrom the names of 19 voters, thus preventing them from polling their votes, and by adding one thereto. It appears that the Sarawak list was not revised by the returning officer this year, he deeming it not necessary to do this, but the deputy returning officer in question, who, by the way, is Clerk of the Township, pointed out that the list did not correspond with the assessment roll for the present year, and considering those persons not qualified to vote, took upon himself the responsibility of making amendments accordingly. It is of course not done maliciously, but no doubt in the belief that he was acting within his right. There were seven contestants for the two seats, and some of the disappointed ones seem determined to take advantage of this irregularity and to try if possible to have another election. There is a difference of two votes between the elected and one of the defeated candidates, and a recount will be had at any rate, which may easily change the present position of the poll.

## NATURAL GAS A MINERAL.

The U. S. Circuit Court of Appeals Decides That Gas Piped From Canada Is Free of Duty.

New York, Jan. 7.—By a decision of the United States Circuit Court of Appeals handed down to-day, natural gas is declared to be a mineral for all the purposes of the statutes and customs laws of the United States. The court affirms the decision of the United States Circuit Court of this district, which affirmed a decision of the Board of General Appraisers, declaring that gas piped from Sarawak, Canada, into Buffalo was not subject to duty, as it comes within the definition of crude minerals.

INFLAMMATORY RHEUMATISM.—Mr. S. Ackerman, Commercial Traveler, Bellefonte, Pa., writes: "Some years ago I used Dr. Thomas' Electric Oil for inflammatory Rheumatism, and three bottles effected a complete cure. I was the whole of one winter, and every movement caused excruciating pain. I am now out on the road and exposed to all kinds of weather, but have never been troubled with rheumatism since. On hand, and I always recommend it to my friends, as it did so much for me."

**CANADA'S PULP AND PAPER INDUSTRY.**  
The Canadian Lumberman furnishes statistics showing the recent development of the pulp and paper industry. Between 3000 and 4000 cords of pulpwood are consumed annually by United States paper manufacturers. This is a great deal more than any other country in the world. The largest pulp and paper concern in the world is said to be the Glen Falls Paper Mills on the Hudson River, which will make 275 tons of finished newspaper per day during the current year. This will require at least 475 cords of pulpwood each day, a quantity equal to 95,000,000 feet of spruce logs in a year. More than eighty per cent. of this spruce is cut in Canada, the balance being obtained in the Adirondacks. This single mill consumes in one year the product of 2,500 acres of land.

These figures give an idea of the rapidly with which this comparatively new industry is devouring our forests of spruce and poplar. The great facts for us to bear in mind in regard to pulp and paper is that Canada has larger supplies of the raw material of this industry than any other country; that many countries, Great Britain included, have no pulpwood whatever; that the industry is expanding all over the world; that Canada not only has abundance of the raw material, but she has valuable water powers and efficient and cheap labor to manufacture the wood into pulp and paper. There is no reason why Canada should not take a leading position among the nations of the world in this industry. We occupy an enviable position. If we take advantage of our opportunities we will not long be content with putting wood for other countries to manufacture into paper. Canada should allow no more pulpwood to be exported. It should all be converted into pulp, if not into paper, before it leaves the country. The tendency of the times is towards concentrating the manufacture of pulp and paper in one establishment. If the Government extends to the industry the protection it should have there will be a great expansion of the business in this country.

**THE GOVERNMENT SHOULD CONTROL THE ROAD.**  
The Roseland Miner, the leading paper of the Trail Creek district, takes pretty much the same view as The World in regard to the Crow's Nest Pass Railway. It insists that the Government of Canada should build and operate the proposed national highway through the Rocky Mountains, connecting the fertile plains of the Northwest and the coal fields of the East Kootenay with the mining districts of the southern part of the province. If the Government controlled this road, as it does the Intercolonial in the east, "two of the principal links in the chain destined to rivet all portions of the Dominion in one homogeneous whole, would be successfully cast." The Miner points out that the principal reason for building the Crow's Nest Pass line is the obtaining of a cheap supply of coal for the mining districts. But, says our contemporary, "the great coal fields of East Kootenay have been reserved to a syndicate of local land sharks, who can only acquire title to these coal fields by building the Crow's Nest Pass Railway. When the railway is built, the Government to build the railway it would forever prevent this syndicate from acquiring title to them, and the accomplishment of this object alone, would be ultimately worth to Canada the entire cost of the railway."

**CANADIAN EGGS IN ENGLAND.**

Mr. E. Morgan, a dealer in eggs and poultry at Delhi, Ont., has issued a circular to the farmers of that district, pointing out to them the danger that may be made from the production of eggs. In his opinion the poultry business is one of the best paying businesses open to the farmer. It must, however, be managed with care and intelligence to insure good results. Mr. Morgan states that he has sold \$25,000 in cash for eggs during 1896, all obtained in the Delhi district, while there was shipped from the same station \$2500 worth of turkeys. The total shipment of poultry and eggs amounted to \$30,000 for the year, or about \$100 a day for every week day of the year. The only market for our surplus eggs, says Mr. Morgan, is Great Britain, and there we have to compete with the whole world. It is very essential therefore that the poultrymen of Canada should study the British market and produce the right kind of article. In order to obtain a ready sale in Great Britain eggs should average up to 1 1/2 pounds per dozen, they should be clean and have a bright appearance. The only complaints that reached Mr. Morgan of Canadian eggs in the English markets last year were that they were too small and that the output of eggs can be largely increased if they will only give more consideration to the poultry business.

**CONSUMPTION'S VICTIMS.**

The total number of deaths in Philadelphia for 1896 was 23,882. Of these 524 were caused by consumption. This is more than ten per cent. of the total, and such troubles as pneumonia and other lung diseases are not included. The same percentage prevails in nearly all the cities of America. It proves that the lungs are the most susceptible to disease of all the organs of the body.

Consumption is to a large extent a preventable disease. If the lungs were supplied with nothing but pure air there would be very few cases of this distressing malady. The victims of drink do not amount in number to one-third the victims of pulmonary disease. While the building of sanitariums to take care of those who are already afflicted with the disease is a commendable object, our principal concern should be centered in the prevention of the disease. People should be encouraged to live in the open air as much as possible. Factories, offices and houses should be properly ventilated, and, as far as possible, consumptive patients should be isolated. The good work that Mr. Gage has interested himself in will, we trust, cause the people to take a more lively interest in the cure of this disease, and the building of sanitariums to take care of those who are already afflicted with the disease is a commendable object, our principal concern should be centered in the prevention of the disease. People should be encouraged to live in the open air as much as possible. Factories, offices and houses should be properly ventilated, and, as far as possible, consumptive patients should be isolated.
